1.0 Introduction

The work conditions of employees are uncertain due to several factors such as mergers, downsizing, outsourcing, acquisitions, use of robots, automation, artificial intelligence, and other structural changes that jeopardize their job security. As a major stressor that impedes employees' personal growth and development, job insecurity (JIS), which is defined as the prospect of unemployment or the fear of losing one's current job in the future, is still a concern for workers. High work engagement personnel are difficult for management to keep in a workplace when workers worry, they may lose their jobs. The dimensions of work involvement are vigor, devotion, and absorption. Positive behavioral and attitude results are reported by workers who are focused, feel energized, and are excited about their work. Nevertheless, research has demonstrated that JIS weakens employee engagement at work and produces negative effects including absenteeism and unproductive work habits.

1.1 Problem statement

by noticed that most of the employees work in the private Hospitals of Sulaimaniyah City Kurdistan Region of Iraq they tend to be late for their work and have the intention to leave their jobs the reason behind this may be they do not receive appropriate support from their leaders and co-workers.

1.2 Objective of the Study

The objective of the current study is to

1 – Identify the level of work social support in private hospitals in Sulaymaniyah city.

2- Identify the level of tardiness and turnover intention in private hospitals in Sulaymaniyah city.

3- Determine the correlation between work social support and (a) tardiness, (b) turnover intention.

4- Determine the effect of work social support on (a) tardiness, (b) turnover intention.

1.3 Framework/study Model of research

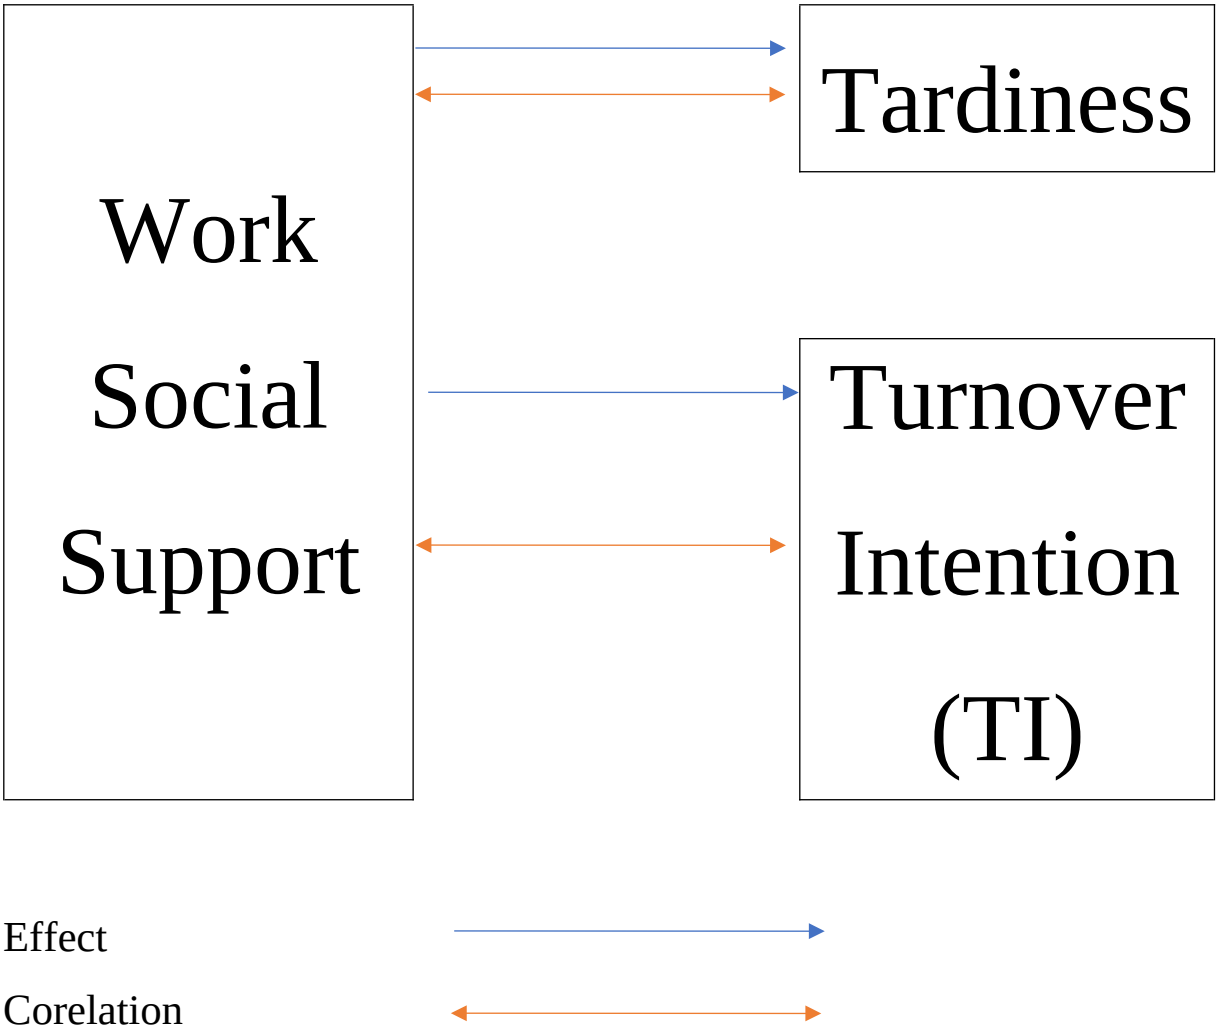

Figure 1 Study model for Research.

1.4 Hypotheses

H1 a : There is a significant Negative correlation between work social support, and tiredness

H1 b : there is a significant Negative correlation between work social support and turnover intention

H2 a : work social support has a negative effect on tiredness

H2 b : work social support has a negative effect on turnover intention

2.0 Literature Review

2.1 Work social support

defined as the assistance and encouragement provided by colleagues and supervisors in a workplace. This support which includes emotional informational and practical help is essential for managing work-related stress improving job satisfaction s (Etehadi and Karatepe 2019).and promoting overall well-being among employees. It is a key factor in creating a positive and supportive organizational culture (Karatepe et al. 2020)

Work social support encompasses various forms of assistance and resources provided by colleagues supervisors and organizations to individuals within the workplace. This support can be emotional instrumental informational or appraisal-based all contributing to employees' well-being job satisfaction and performance. This review critically examines the dimensions of work social support and its implications based on recent research.

2.1.1 Dimensions of Work Social Support

Emotional Support: Emotional support involves expressions of empathy care and understanding from coworkers and supervisors). It provides a sense of belonging and comfort during stressful situations significantly impacting employees' psychological health and job satisfaction (Judge & Scott 2020).

Instrumental Support: Instrumental support refers to physical aid or resources provided by coworkers or the organization to help individuals meet work-related demands (Halbesleben et al. 2014). This may include assistance with tasks workload management or practical help during challenging projects directly influencing employees' performance and job satisfaction (Kammeyer-Mueller et al. 2012).

Informational Support: Informational support involves the provision of advice guidance and relevant information to address work-related problems (Halbesleben et al. 2014). It helps in clarifying role expectations organizational processes and developing need skills positively impacting employees' job performance and satisfaction (Zhang & Noe 2014).

Appraisal Support: Appraisal support entails feedback recognition and acknowledgment of individuals' work performance from supervisors and coworkers. Positive feedback enhances

self-esteem and motivation while constructive criticism promotes learning and development significantly influencing employees' engagement and retention (Cal N. 2022).

2.1.2 Implications for Employee Outcomes

Research indicates that work social support is crucial for various employee outcomes including job satisfaction performance and well-being. A meta-analysis by Halbesleben et al. (Tansin. A 2014) found a positive relationship between work social support and both job satisfaction (r = .47) and job performance (r = .21) highlighting its significance in enhancing workplace outcomes.

work social assist serves as a buffer towards activity stressors inclusive of function big and work-family war mitigating their negative effects on employees' mental fitness (Kaya J.S 2021). companies that adopt a supportive work surroundings via the supply of social assist are possibly to revel in higher tiers of worker engagement retention and standard organizational effectiveness.

The presence of a robust support system within the place of job can lead to numerous tremendous effects for both employees and the organization. For personnel the benefits consist of improved process pride accelerated engagement reduced pressure and burnout and advanced mental fitness and properly-being. those nice individual results in flip make a contribution to organizational fulfillment via advanced overall performance better productivity multiplied creativity and innovation and decreased absenteeism and turnover fees.

A supportive paintings environment fosters a sense of belonging and loyalty amongst employees enhancing organizational dedication and lowering the likelihood of turnover. moreover workplaces that prioritize social support are frequently considered greater favorably via external talent assisting in recruitment efforts and building a strong agency logo.

2.1.3 Strategies for Enhancing Work Social Support

companies can adopt numerous strategies to decorate the scale of labor social guide thereby fostering a superb and supportive place of job lifestyle. leadership training is important as leaders play a pivotal role in placing the tone for the organizational climate. schooling leaders to understand the importance of providing emotional and instrumental help actively paying

attention to employee issues and imparting optimistic comments can considerably impact the guide machine in the place of work.

growing regulations and packages that inspire teamwork collaboration and open communication also can enhance social guide. initiatives together with mentorship packages team-building activities and open boards for sharing ideas and feedback can facilitate emotional and informational aid among employees.

furthermore spotting and rewarding efforts to guide colleagues can toughen the price placed on such behaviors within the employer. imposing reputation programs that well known folks who go above and past to offer assist to their peers can inspire a lifestyle of mutual guide and collaboration.

the size of work social help are crucial to the material of the modern place of business substantially impacting worker well-being and organizational success. by using knowledge and actively improving emotional instrumental informational and appraisal help agencies can create a positive supportive and resilient paintings surroundings. This now not only benefits personnel in terms of activity pride mental health and performance however also contributes to the wider organizational desires of retention productiveness and competitive benefit. inside the dynamic and often difficult panorama of the place of job fostering a way of life of assist isn't just a strategic imperative however a ethical one underscoring the agency's commitment to its maximum valuable asset: its people.

2.2 Tardiness

In the context of workplaces or settings that necessitate punctuality such as scheduled meetings or jobs with specific start times like 8 or 9 AM tardiness is characterized by consistent late arrivals or diminished punctuality during working hours. This issue often comes to light through monthly or annual performance reports. Persistent tardiness can indicate a deeper problem with an employee's time management or commitment to their role within the organization. It not only affects individual productivity but also potentially disrupts the overall workflow and team dynamics. (Symonds 2023).

Tardiness defined as arriving late to work or delaying the start of work-related activities is a pervasive issue in organizational settings that can have significant implications for employee performance team dynamics and overall workplace culture. This comprehensive review critically examines the concept of tardiness exploring its underlying causes consequences and potential interventions based on recent empirical research.

2.2.1 Understanding Tardiness

Tardiness in the workplace is a multifaceted issue that can arise from a confluence of individual traits organizational practices and various situational factors each contributing to the likelihood of employees arriving late to their jobs. This complexity necessitates a nuanced understanding of the diverse causes behind tardiness to effectively address and mitigate its occurrence. From an individual perspective personality characteristics play a significant role in determining one's propensity for punctuality. Specifically traits such as reliability and a strong orientation towards reliability are critical predictors of an individual's tendency to be on time. Those who score high in these traits often exhibit a conscientious approach to their responsibilities including a heightened awareness and commitment to meeting time-bound obligations (Jafir. R 2013). This correlation underscores the importance of considering personality factors in recruitment and selection processes aiming to identify and nurture traits conducive to punctuality and overall workplace efficiency.

On the organizational front several factors have been identified as influential in affecting employees' ability to arrive on time. Commute time stands out as a significant variable with longer commutes being associated with increased instances of tardiness (Xans. K 2018). This relationship highlights the logistical challenges faced by employees particularly those residing

in areas with high traffic congestion or limited access to efficient public transportation. Furthermore workload and scheduling flexibility are pivotal organizational factors that can impact punctuality. Employees burdened with excessive workloads may struggle to manage their time effectively leading to higher rates of tardiness. Conversely organizations that offer scheduling flexibility including options for remote work or adjustable work hours can alleviate some of the pressures that contribute to tardiness thereby enhancing overall punctuality among their staff.

In addition to individual characteristics and organizational policies situational variables also play a critical role in influencing tardiness. Factors such as unforeseen personal emergencies public transportation delays and adverse weather conditions can unpredictably affect one's ability to arrive on time underscoring the complexity of tardiness as a multifaceted issue that extends beyond personal control or organizational influence.

To effectively combat tardiness it is imperative for organizations to adopt a holistic approach that addresses these various dimensions. Implementing flexible work arrangements fostering a culture that values and rewards punctuality and providing support for employees to overcome logistical challenges are strategies that can contribute to reducing tardiness rates. Moreover understanding the role of individual personality traits in punctuality can inform recruitment and development practices ensuring a workforce that is naturally inclined towards reliability and timeliness. (Xans. K 2018).

2.2.2 Consequences of Tardiness

The consequences of tardiness extend beyond individual repercussions to encompass broader organizational impacts. For individuals frequent tardiness can result in damaged relationships with colleagues and supervisors diminished trust and adverse performance evaluations (Uiz. Xal 2021). Moreover tardiness can disrupt team dynamics impede workflow and contribute to a negative work environment characterized by stress and inefficiency (Jamsi N. W. 2016).

2.2.3 Interventions and Strategies of Tardiness

Addressing tardiness within the place of work necessitates a comprehensive and layered strategy that encapsulates a vast spectrum of interventions and projects aimed toward each the character and organizational ranges. This multifaceted approach is crucial for successfully mitigating the factors that contribute to tardiness thereby fostering a extra punctual effective and harmonious paintings surroundings.

on the center of this method is the implementation of flexible scheduling alternatives which can significantly alleviate the pressures and challenges that lead to employees being overdue. with the aid of introducing telecommuting possibilities compressed workweeks or flexible start and cease times organizations can accommodate the diverse life instances and needs of their body of workers. Such measures now not only deal with the direct causes of tardiness but also demonstrate an employer's dedication to assisting their employees' paintings-existence balance in the end enhancing task satisfaction and loyalty. This attitude on flexibility was underscored in the paintings of Talim L. (2021) who highlighted its effectiveness in lowering times of lateness and improving normal employee morale.

similarly essential is the cultivation of a culture that values and promotes punctuality. clean conversation regarding the significance of timeliness coupled with placing explicit expectancies and outcomes for tardiness lays a foundation for duty. To similarly encourage punctuality corporations can introduce incentives for timely attendance such as recognition packages bonuses or other rewards. This method not simplest motivates employees to stick to schedules however also contributes to a fine and punctual organizational culture.

beyond structural and policy-driven answers addressing tardiness efficiently also calls for targeted interventions on the character degree. employees may additionally face unique non-public demanding situations that impact their capacity to arrive on time such as difficulties with time control unpredictable go back and forth problems or struggles with sleep deprivation and work-existence stability. offering targeted assist which includes time-management training resources for green go back and forth planning or counseling services can empower employees to address these boundaries head-on. Nest L. (2005) emphasised the significance of these individualized strategies in enhancing employees' ability to manage their time and obligations greater efficiently thereby reducing instances of tardiness and contributing to their overall properly-being and overall performance.

furthermore it is important to understand that underlying private issues including fitness problems own family responsibilities or psychological stressors can also make contributions to tardiness. A supportive and know-how technique that addresses those root causes is essential. by way of presenting access to worker help applications health and wellness assets or flexible depart guidelines corporations can assist personnel manage those demanding situations main to improved punctuality and productivity.

effectively addressing tardiness calls for a holistic and empathetic approach that considers both the individual and organizational dimensions. through blending bendy and adaptive scheduling alternatives with a tradition that values punctuality and by imparting targeted help to employees going through unique demanding situations corporations can significantly reduce tardiness. This not best enhances operational performance however also builds a supportive inclusive and excessive-acting place of work lifestyle.

2.3 Turnover intention

refers to an employee's deliberate consideration or plan to leave their current position or organization. This concept is a key indicator of employee dissatisfaction and is often influenced by factors such as job dissatisfaction lack of engagement poor work-life balance inadequate compensation or strained relationships with colleagues or supervisors. High turnover intentions can be detrimental to organizational stability and performance as they often lead to actual turnover resulting in increased recruitment and training costs and potential disruptions to team dynamics and productivity. (Haltin. K. 2022)

the inclination or readiness of employees to leave their current employment is a critical issue in organizational settings with significant implications for employee retention organizational performance and overall workplace dynamics. This comprehensive review critically examines the concept of turnover intention exploring its antecedents consequences and potential strategies for mitigating its adverse effects based on recent empirical research.

2.3.1 Understanding Turnover Intention

turnover intention are man or woman-level traits that play a pivotal position in shaping an employee's inclination to leave their cutting-edge role. elements which include activity satisfaction organizational dedication and the belief of viable activity options stand out as good-sized predictors of turnover aim. job pride or the extent to which personnel feel content material with their roles immediately influences their preference to stay inside a company. similarly organizational commitment which displays a worker's emotional attachment to identification with and involvement in the organization can considerably deter the purpose to leave. furthermore the belief of job alternatives impacts turnover goal with the aid of determining how easily a worker believes they can locate similar or better employment someplace else. these insights had been highlighted in the seminal paintings of Hassan & Ahmed (2011) who underscored the important impact of those character factors on turnover intentions.

beyond the character job-associated variables present every other layer of complexity in information turnover aim. position ambiguity or the lack of clarity regarding process obligations expectations and responsibilities can cause frustration and dissatisfaction fueling the preference to seek employment someplace else. paintings-lifestyles stability which refers to the extent to which a character is capable of harmoniously combine their paintings and private lifestyles also

plays an essential role. employees struggling to preserve a healthful balance among these spheres can also understand leaving their process as a feasible solution to enhance their fine of existence. moreover perceived fairness in the administrative center encompassing fairness in repayment recognition and decision-making strategies substantially impacts personnel' experience of fee and equity which in turn influences their intentions to depart. these task-associated elements collectively contribute to a worker's typical work enjoy and pleasure in the end affecting their likelihood of searching for other possibilities.

2.3.2 Consequences of Turnover Intention

The ramifications of turnover goal ripple thru companies exerting a profound impact on each the micro and macro stages of overall performance and operational effectiveness. This phenomenon a long way from being isolated to the individual’s contemplating departure affects a extensive array of organizational dynamics which include productiveness understanding retention crew capability morale and the overarching organizational subculture.

excessive turnover goal as delineated within the foundational studies of Griffeth Hom & Gaertner (2020) acts as a precursor to actual turnover main to a cascade of unfavorable results. one of the maximum instantaneous results is a decline in productivity. The technique of changing employees is not simplest highly priced however time-eating at some point of which the paintings formerly executed via departing employees both stalls or burdens the last workforce potentially leading to overwork and in addition dissatisfaction. furthermore turnover is not merely a lack of numbers but a drain of knowledge and experience that departing personnel take with them. This information drain can be particularly debilitating in roles that require specialized capabilities or in-depth organizational expertise because the studying curve for brand new hires can substantially impede development and innovation.

The disruption extends into the very cloth of group dynamics and workflow. teams are ecosystems of interdependent roles wherein the departure of even a unmarried member can disrupt workflow put off initiatives and fracture group cohesion. Such disruptions aren't without problems remedied and the technique of integrating new members into present teams.

2.3.3 Interventions and Strategies of Turnover Intention

Addressing turnover intention within the workforce is an intricate and comprehensive endeavor that necessitates a well-rounded strategy incorporating targeted interventions at both the individual and organizational levels. This dual-focused approach is crucial for effectively mitigating the myriad factors that contribute to employees' intentions to leave aiming to cultivate a stable engaged and satisfied workforce.

At the individual level organizations have a significant opportunity to impact turnover intention through direct engagement with employees. Enhancing job satisfaction emerges as a primary strategy in this regard. By ensuring that employees find their work meaningful rewarding and aligned with their personal and professional goals organizations can significantly diminish the allure of seeking employment elsewhere. Furthermore providing ample opportunities for skill development and career advancement can address employees' intrinsic motivations for growth and achievement directly influencing their decision to stay. A supportive work environment characterized by effective management positive peer relationships and a culture of respect and inclusivity further reinforces employees' attachment to their workplace (Albert K. 2021).

Organizational strategies extend beyond individual interventions encompassing broader policy and cultural initiatives designed to reduce turnover intention across the workforce. Implementing fair and transparent human resources policies and practices is foundational in this context. Such policies ensure that all employees are treated equitably and that decisions regarding promotions rewards and disciplinary actions are made transparently and justly. Promoting work-life balance through flexible work arrangements supportive leave policies and resources for managing personal responsibilities outside of work can significantly enhance employee satisfaction and loyalty (Meyer & Allen 2014). Moreover offering competitive compensation and benefits packages is essential for retaining talent especially in competitive job markets where alternative employment opportunities may offer more attractive terms.

Cultivating a positive organizational culture is another pivotal strategy for reducing turnover intention. A culture characterized by open communication encourages employees to share ideas feedback and concerns fostering an environment of trust and collaboration. Recognizing and rewarding employees for their contributions reinforces their sense of value and accomplishment. Additionally creating opportunities for involvement and participation in decision-making processes can enhance employees' sense of agency and belonging further

embedding them within the organization and reducing their intention to leave (Meyer & Allen 2014).

Understanding the complex factors that influence turnover intention is vital for crafting effective retention strategies. Factors such as job satisfaction organizational commitment perceived organizational support and job embeddedness significantly impact employees' decisions to stay or leave (Sablynski. L 2017). Employees who experience low levels of job satisfaction feel a weak connection to their organization or perceive their opportunities for career advancement as limited are more likely to consider leaving. This underscores the importance of organizations actively addressing these antecedents through comprehensive and thoughtful strategies designed to bolster employee engagement satisfaction and commitment.

the inclination or readiness of employees to leave their current employment is a critical issue in organizational settings with significant implications for employee retention organizational performance and overall workplace dynamics. This comprehensive review critically examines the concept of turnover intention exploring its antecedents consequences and potential strategies for mitigating its adverse effects based on recent empirical research.

Table (1) Empirical Studies for Work Social support

Study Number 1	
Name of Researcher (Year)	Siebert, J. U., Kunz, R. E., & Rolf, P. (2020)
Title	Effects of proactive decision making on work support from European Journal of Operational Research
Type of Study	Quantitative social research typically uses surveys and questionnaires to obtain information
Place of Study	France
Sample Size	1300
Statistical Package	SPSS
Aim	Beds proactive decision making within a model of three possible consequences. We consider—and empirically test—that the work will support them 1300 participants.
Result	Amount the participation they have find out that work social support is positive factor on employees health
Recommendation	Ident-tidying and analyzing the possible antecedents of would help us better understand why some individuals are more effective than others when applying proactive
Study Number 2	
Name of Researcher (Year)	Georgiana Karadas, Osman M. (2013)
Title	Unravelling the black box: The linkage between work social support
Type of Study	Quantitative social research typically uses surveys and questionnaires to obtain information
Place of Study	Fenland
Sample Size	621
Statistical Package	SPSS
Aim	Is to investigate the potential mediators that operate in the black box between work social support and employee outcomes
Result	Researcher found a positive correlation between employees work

	social spurt and Tardiness
Recommendation	Data came from employees in three time periods, which were separated by a two-week time lag our study used several procedural remedies to mitigate the likelihood of
Study Number 3	
Name of Researcher (Year)	Yap, M., Holmes, M. R., & Cukier, W. (2015)
Title	The relationship between diversity training, organizational commitment, and career satisfaction
Type of Study	The study is a quantitative research paper, as it uses survey data and statistical analysis to examine relationships
Place of Study	USA
Sample Size	11,000
Statistical Package	SPSS
Aim	The primary aim of the study is to investigate the relationship between employees' perceptions of (DT) and
Result	There is a significant effect of terseness and career satisfaction
Recommendation	A bigger sample size can be collected to import the results
Study Number 4	
Name of Researcher (Year)	Smthen, B. (2019)
Title	Influence of work social Systems on Workplace Innovation
Type of Study	Quantitative social research typically uses surveys and questionnaires to obtain information
Place of Study	India
Sample Size	315
Statistical Package	SPSS
Aim	Explore if there's a significant influence of work social support on

	innovative practices at the workplace
Result	Work social support is a significantly fosters innovative practices in the workplace
Recommendation	Innovation teams should be trained in social support and work for better results.
Study Number 5	
Name of Researcher (Year)	Rogers, B. (2018)
Title	Influence of Social support on Work that is part of the team
Type of Study	Quantitative social research typically uses surveys and questionnaires to obtain information
Place of Study	Norway
Sample Size	315
Statistical Package	SPSS
Aim	Explore if there's a significant correlation of work support on innovative practices
Result	Social support is a significantly fosters innovative practices in the workplace
Recommendation	Enhance job satisfaction through workload management and employee recognition programs

Source imported based on Literature.

Table (2) Empirical studies for Tardiness

Study Number 1	
Name of Researcher (Year)	Brown, A. & Jenkins, H. (2022)
Title	Impact of Tardiness on Team Dynamics from Journal of Workplace Behavior
Type of Study	Quantitative analysis using employee surveys and attendance records
Place of Study	Canada
Sample Size	435
Statistical Package	R programing language
Aim	To understand how tardiness affects team collaboration and project delivery
Result	Tardiness significantly disrupts team dynamics and delays project completion
Recommendation	Implement flexible working hours and remote work options to reduce tardiness
Study Number 2	
Name of Researcher (Year)	Patel, S. & Nguyen, L. (2017)
Title	Tardiness in the Tech Industry: An Overlooked Issue?
Type of Study	Mixed-methods study, combining qualitative interviews and quantitative survey data
Place of Study	Silicon Valley, USA
Sample Size	905
Statistical Package	R programing language
Aim	Investigate the prevalence and impact of tardiness in the fast-paced tech industry
Result	Tardiness is common but often ignored, affecting team morale and productivity
Recommendation	Establish clearer policies and support systems for tardiness management
Study Number 3	

Name of Researcher (Year)	Gomez, R. & Lee, Y. (2019)
Title	Correlation Between Tardiness and Job Satisfaction
Type of Study	Quantitative analysis using employee feedback and performance metrics
Place of Study	South Korea
Sample Size	530
Statistical Package	Python (Pandas)
Aim	Examine the relationship between employee tardiness and their overall job satisfaction
Result	A strong correlation between frequent tardiness and lower job satisfaction
Recommendation	Enhance employee engagement programs to address underlying causes of tardiness
Study Number 4	
Name of Researcher (Year)	Clarkson, D. (2021)
Title	Tardiness Trends and Employee Performance in Retail
Type of Study	Longitudinal quantitative study monitoring tardiness and sales performance
Place of Study	United Kingdom
Sample Size	256
Statistical Package	Excel
Aim	Assess the impact of employee tardiness on sales performance and customer satisfaction in retail
Result	Retail outlets with higher tardiness rates showed a noticeable drop in sales performance
Recommendation	Incentivize punctuality to improve sales performance and customer satisfaction
Study Number 5	Detail
Name of Researcher (Year)	Torres, E. & Schmidt, P. (2020)
Title	The Effect of Commute on Employee Tardiness

Type of Study	Quantitative study analyzing travel patterns and tardiness logs
Place of Study	Brazil
Sample Size	407
Statistical Package	MATLAB
Aim	Analyze how commuting challenges contribute to employee tardiness
Result	Longer commutes are directly linked to increased rates of tardiness
Recommendation	Invest in flexible commuting options and adjust work hours to accommodate traffic patterns

Source imported based on Literature.

Table (3) Empirical Studies About Turnover Intention TI

Study Number 1	
Name of Researcher (Year)	Ahmed jawhar mohammad, Bryar Sami Abdulrahman Khowanas Saeed Qader, Diyar Abdulmajeed Jamil 2022
Title	The mediation role of organizational culture between employee turnover intention and job satisfaction
Type of Study	quantitative method
Place of Study	Erbil Kurdistan Iraq
Sample Size	78
Statistical Package	SPSS
Aim	investigate the mediation role of employee turnover factors including (employee overworked, lack of feedback, lack of growth, lack of recognition, lack of reward) with job satisfaction
Result	the test revealed that organizational culture strongly mediates the association between employee turnover factors (employee overworked, lack of feedback, lack of growth, lack of recognition, lack of reward) and job satisfaction in selected private businesses in Iraq's Kurdistan.
Recommendation	Monitoring employee working conditions and enhancing the organizational environment of companies is particularly essential since it is likely to improve the quality of management by aiding in the retention of talented staff.
Study Number 2	
Name of Researcher (Year)	Govand Anwari & Inji Shukur 2015
Title	Job Satisfaction and Employee Turnover Intention: A Case Study of Private Hospital in Erbil
Type of Study	Qualitative method
Place of Study	Erbil Kurdistan Iraq
Sample Size	144
Statistical Package	SPSS

Aim	To find out the correlation between job satisfaction and employee turnover interest in privet hospital in Erbil
Result	There is a positive correlation between job satisfaction and employee turnover
Recommendation	Greater the employee job satisfaction the less likeley to turnover
Study Number 3	Detail
Name of Researcher (Year)	Fatemeh Hajibabaee , Avang Hussein Mahmoo (2023)
Title	On the Relationship Between Job Satisfaction and Burnout Among Nurses Working in Hospitals of Erbil, a City in Kurdistan Region of Iraq
Type of Study	descriptive, correlational, and cross-sectional study
Place of Study	Erbil Kurdistan Iraq
Sample Size	455
Statistical Package	SPSS
Aim	determine the relationship between job satisfaction and burnout among nurses working in hospitals of Erbil, a city in the Kurdistan region of Iraq, during 2015 - 2016
Result	According to the findings, 7.8% of nurses had low job satisfaction, 45.2% had moderate job satisfaction, 42.7% had high job satisfaction, and 4.4% had remarkably high job satisfaction. The burnout results showed that the mean values were 36.16 ± 12.51 for the lack of personal success, 13.38 ± 9.86 for emotional exhaustion, and 8.67 ± 8.39 for depersonalization.
Recommendation	To further reduce nurses' burnout, managers should encourage and promote effective communication in work environments and ensure that nurses participate in decision-making..
Study Number 4	
Name of Researcher (Year)	Hughes, S. & Parker, A. (2022)

Title	Analyzing Turnover Intention in Startups: A Case Study
Type of Study	Mixed-methods approach with surveys and case studies in startups
Place of Study	Silicon Valley, USA
Sample Size	102
Statistical Package	R programing language
Aim	Understand the unique factors influencing turnover intentions in startup environments
Result	Startups with robust career development programs have lower turnover intentions
Recommendation	Focus on career development and job stability to retain talent in startups
Study Number 5	
Name of Researcher (Year)	Belmont, J. & Fitzgerald, K. (2017)
Title	Job Satisfaction and Turnover Intentions in Healthcare
Type of Study	Quantitative study using surveys in healthcare settings
Place of Study	Australia
Sample Size	131
Statistical Package	SPSS
Aim	Assess the relationship between job satisfaction and turnover intentions in healthcare professionals
Result	Direct correlation between low job satisfaction and high turnover intentions in healthcare
Recommendation	Enhance job satisfaction through workload management and employee recognition programs

Source imported based on Literature.

1. In this empirical study we have considered 3 variables and based on then for each variable we took 5 research for each variable 5 research for variable 1 and 2 and 3 in total we reviewed 15 research.
2. The simple population of the studies varies from 100 to 1000.
3. from development countries or 1st world countries like Europe and united states of America (USA), while our study is mostly based on the private health sector specifically due to the lack of literature in this fields, we tended to consider other avenues like other sectors and other places where this variable has been conducted studies on and it varies based 3 of them were from Kurdistan region of iraq.
4. the study in most of the studies the statistical package or the tools that been used for analyzing the data mostly SPSS, R programing language and excel.
5. This empirical study was useful in terms of finding variables questionnaires and statistical package and refrains for my work on this research.

2.4 What distinguishes the current study from other studies?

While we searcher for works that have been done previously on this topic specifically on the variables that we want to address in this research we could not find any research done on this topic or on public health sector and taking into account this three variables : variables work social support ,Tardinessand turnover intention, specialty in or regain there is only thee research's done on one of the variables that as it has been mentioned in the empirical study, so based on this evidence and our findings we can argue that we have a research that is strong and it has not been conducted yet in both the Iraq and other countries. In health care while there may not be that much of an interion to turnover an employer form there working organization or environment regarding there tiredness, and as per our development of the hypothesis we can find out the correlation or the effect of the dependent variable on the independent variables.

3.0 Methodology

The method we are going to be using is survey data collection from a physical form that we distribute among the hospitals in the city of Sulaimani and then using quantitative methods and analyzing the data using SPSS V24 to test our hypothesis from the three variables we have set initially in the beginning of the research.

As shown in table is the number of each question that we have asked the participants of this research to answer on a scale of 1 to 5 and reporting us back with the results.

Table (4) Number of questions

Variable	**Number Of Questions**
Work Social Support (WSS)	**5**
Tardiness(TIR)	**7**
Turnover Intention (TI)	**4**
Total Questions of the Questionnaire	**16**

4.0 Results

4.1 Data Preparation and Data Screening:

After collecting data, researchers focus on data analysis. If the project was well planned and executed, the analysis planning completed using the results of the pilot test. The final data cannot, however, be immediately analyzed after they have been collected. To get the data ready for analysis, a number of processes are necessary. Data entering, data cleansing, and data editing are typically involved in the process. The procedures listed above assist in producing data that is ready for analysis. It is crucial to adhere to these procedures when preparing data since erroneous data might lead to improper analysis and conclusions, which could compromise the research's goals and force the researcher to make poor decisions.

4.2 Identifying Missing Data and Outliers.

In all areas of the natural and social sciences, missing values and outliers regularly found during the data-gathering phase of observational or experimental studies. Missing values can result from data loss, participant dropouts, and nonresponses, among other things. Missing values result in a smaller sample size than expected, which eventually jeopardizes the validity of the study's findings. When conclusions about a population made based on such a sample, it can also lead to skewed results, weakening the validity of the data. The frequency distributions method provided in the SPSS v24 application used to determine whether some data numbers were lost in order to locate missing data. There were no missing in the data, which was complete. Hence, it facilitates the researchers' execution of the remaining experiments. The findings indicated that there are no outliers in the data, which makes it easier to confirm the validity of the analysis's findings when they are extracted using statistical software (SPSS.V.24).

4.3 Reliability Analysis test:

Reliability analysis carried out for all study variables using the Cronbach-Alpha method, which is one of the best measures of Reliability for descriptive phrases, to find out the Reliability of the questionnaire in the event of changing conditions and time for the respondents. In this study, data analyzed using the program (SPSS, V.24), and the results showed in the table 5:

Table (5) Reliability Analysis test

Variable	Number Of Questions	Coefficient Value
Work Social Support (WSS)	**5**	**.843**
Tardiness(TIR)	**7**	**.821**
Turnover Intention (TI)	**4**	**.814**

The Cronbach's Alpha for each variable is calculated, and for Work Social Support (WSS), Tardiness(TIR), Turnover Intention (TI), and Total Questions of the Questionnaire respectively, the values are 0.843, 0.821, 0.814, and 0.874, indicating good reliability standards. As a result, the findings indicate that all reliability measures for the study variables have been higher than the necessary value of 0.7.

4.3.1 Exploratory Factor Analysis (EFA):

The Exploratory Factor Analysis (EFA) process computes factor loading for each question, indicating the effectiveness in measuring the construct and figuring out the dimensionality of questions. According to Hair et al., (2019), 0.50 is the lowest factor loading value is acceptable. Exploratory Factor Analysis (EFA) carried out first before proceeding to subsequent analysis, which is Confirmatory Factor Analysis (CFA). Especially in social science research, Exploratory Factor Analysis (EFA) has been one of the most frequently used statistical techniques. In order to verify the validity and reliability of the acquired data, Exploratory Factor Analysis (EFA) through Principal component Analysis (PCA). Factor analysis used for further analyse the data. Indicating that factor analysis might proceed, the KMO statistic's values exceeded the suggested value of 0.5 and reached significant levels of probability for Bartlett's test (p<001) (Williams, et al, 2012).

Table (6) Exploratory Factor Analysis (EFA) results

Questions	Extraction	Results	Questions	Extraction	Results
WSS1	.589	Acceptable	TIR4	.690	Acceptable
WSS2	.754	Acceptable	TIR5	.593	Acceptable
WSS3	.734	Acceptable	TIR6	.613	Acceptable
WSS4	.713	Acceptable	TIR7	.652	Acceptable
WSS5	.645	Acceptable	TI1	.612	Acceptable
TIR1	.612	Acceptable	TI2	.634	Acceptable
TIR2	.590	Acceptable	TI3	.599	Acceptable
TIR3	.596	Acceptable	TI4	.596	Acceptable

4.3.2 Kaiser-Meyer-Olkin (KMO) Measure of Sampling Adequacy/Bartlett's Test of Sphericity

Between 0 and 1, the KMO index ranges, with 0.50 being deemed adequate for factor analysis. To use factor analysis, the Bartlett's Test of Sphericity must be significant ($p<.05$) (Williams, et al, 2012). Table (7) displays the findings of the data fit of the study variables data for the factorial analysis. The findings show that, with support from the results of the (Bartlett) test, the value of the data fit index reached (.607), which is higher than the test's standard value of (0.50). The fact that the calculated (chi-square) value of (1209.609) is higher than the tabular (chi-square) value of (113.145) at the degree of freedom (df=120) and that the significant value of this test was (0.000)—less than the study's default significant value of (0.05)—confirms that the study variables' data are appropriate for the factorial analysis of the current study.

Table (7) KMO and Bartlett's Test results

Kaiser-Meyer-Olkin Measure of Sampling Adequacy.		.607
Bartlett's Test of Sphericity	Approx. Chi-Square	1209.609
	df	120
	Sig.	.000

4.4 Common Method Bias (CMB) and Collinearity Test

Common Method Bias (CMB) is a "systematic error variance shared among variables measured with and introduced as a function of the same method and/or source" (Richardson et al, 2009: 763). This systematic error variance, or common method bias, might skew the estimated connections between measures. The common method viewed as a confounding variable that effects both of the substantive variables in a systematic way when there is bias in the estimated relationship between two variables. The observed relationship between the important substantive variables may as a result be inflated or deflated.

Common method bias (CMB) test carried out using the Harman Single-Factor. There are no precise rules on how much variation explained by this factor in order to conclusively prove that this variance exists. The threshold is typically set at 50% as a heuristic (MacKenzie and Podsakoff, 2012). The result of Common method bias (CMB) recorded (38.783%) which consider acceptable value.

4.4.1 Description of the demographic information of the study sample:

The results recorded in table 11 provide a summary of the demographic data for the study

1. **Gender:** Table 11 shows that most of the sample are females, whose percentage was equal to (64.1%) of the total sample, with a frequency of (98) individuals, while the percentage of males was equal to (35.9%) of the sample, with a frequency of (55) individuals. This indicates that employment opportunities are not equal between males and females in the organizations surveyed.

2. **Age:** It is clear from the results of table 11 that the age group (18-25 years) constituted much of the sample, which came at a rate of (39.2%) of the sample size. Then, the age group (31 – 40 years) ranked second, with a rate of (36.6%) of the sample, and the age group (26 – 30 years) came in the third place, with a rate equal to (18.3%) of the sample. As for the last rank, the age group was (More than 51 years), with a rate of (2.0%)

3. **Education Level:** Most of the sample are holders of a bachelor's degree, and their percentage was (83.0%) of the sample size, while the rest are distributed in different proportions, as the percentage for the academic qualification category (High school)

amounted to (11.1%) of the sample size. Then the (Master's degree) category, with a rate of (5.9%) of the total size of the study sample.

4. **Marital status:** Table 11 shows that much of the sample are Married, whose percentage was equal to (68.0%) of the total sample, with a frequency of (108) individuals, while the percentage of Single was equal to (32.0%) of the sample, with a frequency of (49) individuals.
5. **Employment type:** Table 11 shows that most of the the sample's Employment type are full time, whose percentage was equal to (59.5%) of the total sample, with a frequency of (91) individuals, while the percentage of the sample's Employment type that work as part time was equal to (40.5%) of the sample, with a frequency of (62) individuals.
6. **Organizational tenure:** It is clear from the results of table 11 that the Organizational tenure group (1-5 years) constituted the majority of the sample, which came at a rate of (45.1%) of the sample size. Then, the Organizational tenure group (6 – 10 years) ranked second, with a rate of (27.5%) of the sample, and the Organizational tenure group (less than one year) came in the third place, with a rate equal to (26.1%) of the sample. As for the last rank, the Organizational tenure group was (11-15 years), with a rate of (1.3%) of the sample size.

Table 8 demographic information analysis of the study sample

Demographic	Categories	Frequency	Percent
Gender	Male	55	35.9
	Female	98	64.1
Age	18-25 years	60	39.2
	26 – 30 years	28	18.3
	31 – 40 years	56	36.6
	41 – 50 years	6	3.9
	More than 51 years	3	2.0
Education Level	High school	17	11.1
	Bachelor's degree	127	83.0
	Master's degree	9	5.9
Marital status	single	49	32.0
	married	104	68.0
Employment type	full time	91	59.5
	part time	62	40.5
Organizational tenure	Less than 1 year	40	26.1
	1-5	69	45.1
	6-10	42	27.5
	11-15	2	1.3

Total	**153**	**100**

4.5 Descriptive Statistics of the study sample perspectives:

The five-point Likert scale used to measure attitudes and perspectives of study sample, which represented five degrees for each question of the questionnaire, and the analysis of opinions and individual study responses using statistical analyzes (such as frequency distributions, percentages, means, and standard deviation). For each of the study variables using the (SPSS) program and they explained as follows:

4.5.1 Descriptive Statistics of Work Social Support (WSS) Variable:

The results of the five questions (WSS1- WSS5) that structure the descriptive statistics of Work Social Support (WSS) shown in Table (12). The total mean, and standard deviation, values calculated of this variable are (3.74) and (1.090), respectively at the significance value (2-tailed) of (0.000). Additionally, question (WSS3), which had a mean of (3.84) and a standard deviation of (1.127) recorded the highest mean. This question states, “My supervisor encourages employees he/she supervises to develop new ways of doing things". However, the lowest mean achieved by question (WSS1), which mean of (3.59) and had a standard deviation of (1.321). Question (WSS1) states that “My supervisor encourages employees he/she supervises to work as a team”.

Table 9 Descriptive Statistics of Work Social Support (WSS)

Q.	**Strongly Disagree**		**Disagree**		**Neutral**		**Agree**		**Strongly agree**		**Mean**	**St. Deviation**	**Rank**
	%	**F.**	**%**	**F.**	**%**	**F.**	**%**	**F.**	**%**	**F.**			
WSS1	13.7	21	5.9	9	15.7	24	37.3	57	27.5	42	3.59	1.321	5
WSS2	5.2	8	4.6	7	26.8	41	42.5	65	20.9	32	3.69	1.021	4
WSS3	5.9	9	5.9	9	19.6	30	35.9	55	32.7	50	3.84	1.127	1
WSS4	2.0	3	6.5	10	25.5	39	41.2	63	24.8	38	3.80	.953	2
WSS5	3.3	5	7.8	12	22.9	35	39.2	60	26.8	41	3.78	1.032	3
Total of Work Social Support (WSS)											**3.74**	**1.090**	

4.5.2 Descriptive Statistics of Tardiness(TIR) Variable:

The results of the seven questions (TIR1- TIR7) that structure the descriptive statistics of Tardiness (TIR) shown in Table 11. The total mean, and standard deviation, values calculated of this variable are (2.23) and (1.321), respectively at the significance value (2-tailed) of (0.000). Additionally, question (TIR6), which had a mean of (2.56) and a standard deviation of (1.551) recorded the highest mean. This question states, “I find it acceptable to leave work ten minutes early". However, the lowest mean achieved by question (TAI3), which mean of (1.90) and had a standard deviation of (1.140). Question (TIR3) states that “Have you faced any disciplinary actions or warnings due to tardiness in the past year”.

Table 10 Descriptive Statistics of Tardiness(TIR)

Q.	Strongly Disagree		Disagree		Neutral		Agree		Strongly agree		Mean	St. Deviation	Rank
	%	F.	%	F.	%	F.	%	F.	%	F.			
TIR1	42.5	65	20.9	32	15.7	24	7.8	12	13.1	20	2.28	1.416	4
TIR2	28.8	44	30.1	46	31.4	48	3.9	6	5.9	9	2.28	1.103	3
TIR3	52.3	80	19.0	29	19.0	29	5.9	9	3.9	6	1.90	1.140	7
TIR4	49.0	75	24.2	37	16.3	25	5.2	8	5.2	8	1.93	1.157	6
TIR5	35.3	54	31.4	48	3.9	6	15.7	24	13.7	21	2.41	1.449	5
TIR6	36.6	56	22.2	34	9.8	15	11.8	18	19.6	30	2.56	1.551	1
TIR7	39.2	60	30.1	46	7.8	12	7.8	12	15.0	23	2.29	1.437	2
Total of Tardiness(TIR)											**2.23**	**1.321**	

4.5.3 Descriptive Statistics of Turnover Intention (TI) Variable:

The results of the seven questions (TI1- TI4) that structure the descriptive statistics of Turnover Intention (TI) shown in table 14 The total mean, and standard deviation, values calculated of this variable are (2.36) and (1.298), respectively at the significance value (2-tailed) of (0.000). Additionally, question (TI4), which had a mean of (2.70) and a standard deviation of (1.214) recorded the highest mean. This question states, “Have recent changes within the organization influenced your thoughts about staying in your current job?". However, the lowest mean achieved by question (TI3), which mean of (2.18) and had a standard deviation of (1.330). Question (TI3) states that “I am currently looking for a new job”.

Table 11 Descriptive Statistics of Turnover Intention (TI)

Q.	Strongly Disagree		Disagree		Neutral		Agree		Strongly agree		Mean	St. Deviation	Rank
	%	F.	%	F.	%	F.	%	F.	%	F.			
TI1	32.0	49	30.1	46	19.0	29	7.8	12	11.1	17	2.36	1.306	2
TI2	38.6	59	30.7	47	11.8	18	7.2	11	11.8	18	2.23	1.345	3
TI3	41.2	63	27.5	42	14.4	22	5.9	9	11.1	17	2.18	1.330	4
TI4	21.6	33	17.0	26	42.5	65	7.8	12	11.1	17	2.70	1.214	1
Total of Turnover Intention (TI)											**2.36**	**1.298**	

4.6 Examining the study hypotheses:

Table 15 illustrates the analysis result of the first hypothesis. Pearson's (r) correlation was used to test the correlation between the study variables. The analysis result shows that the variables negatively related. Table (15) explains that work social support were negatively correlated with Tardinessas well as work social support were negatively correlated with intention as the value of the correlation coefficient was above moderate (-.697**) and (-.573**) at the level of significance (0.01) and reached the value of significant at (0.000). Consequently, accepting the correlation hypothesis between study variables that states there is a significant Negative correlation between work social support, and Tardinessand there is a significant Negative correlation between work support and turnover intention.

Table 12 Correlation analysis between the study variables

Variables	Tiredness	Turnover Intention
Work Social Support	-.697**	-.573**
Sig. (2-Tailed)	.000	.000

Besides, to analysis the second main hypotheses, the researchers conducted a multiple linear regression analysis to discover the effect of work social support on Tardinessand turnover intention. From the analysis it shows that work social support illustrates -71.2% of the Tardinessand -73.4% of the turnover intention as described by the (R^2). The significance value is 0.000 which is less than 0.05. Thus, the model is statistically significance in predicting how the work social support effects negatively on Tardinessand turnover intention. At 5% level of significance, the f calculated was 488.397, which explains that the overall model was significant. As a result, the second main hypotheses accepted that states work social support has a negative effect on Tardinessas well as social support has a negative effect on turnover intention.

Table 13 significance value

Variable	Tardiness				
	β	**t**	**F value**	**R²**	**sig**
WSS	0.332	29.400	488.397	-71.2	0.00
	Turnover Intention				
WSS	0.430	30.211	493.895	-73.4	0.00

5.0 Conclusion

work social aid is vital for workers' proper-being, especially in relation to fatigue and aim to go away. personnel are much more likely to address paintings demands and sense much less exhausted once they understand assist from their superiors and coworkers. This help can take many distinct bureaucracies, consisting of informational, realistic, and emotional assist. additionally, social aid allows mitigate the damaging effects of pressures associated to the place of job, consisting of fatigue. workers are much more likely to stay engaged of their career and are less possibly to enjoy burnout when they perceive sturdy quantities of social support. additionally, social assist has been observed to be negatively related to turnover purpose. personnel who sense supported at paintings are much more likely to experience glad about their jobs and dedicated to their companies, decreasing their intention to go away.

paintings social support improves organizational effectiveness further to assisting character personnel. employee motivation, engagement, and commitment to their paintings are extended when they experience endorsed, and this could result in extended output and stepped forward overall performance. In a corporation, the diploma of social assist also depends closely on group dynamics. teams which can be sturdy, cohesive, and supportive of one another are more likely to have lower ranges of fatigue and aim to go away. work social assist is an essential device which could enhance employee wellness, lessen fatigue, and reduce preference to leave. Employers who region a excessive precedence on fostering a fantastic paintings surroundings stand to gain from a personnel this is greater dedicated, engaged, and effective.

In summary, work social support is an important tool which could assist personnel in dealing with fatigue and lowering the likelihood of leaving the employer. organizing a collaborative and respectful paintings environment, encouraging strong connections among employees, and presenting options for them to searching for help while required have to be top priorities for corporations. businesses may improve employee well-being, task pleasure, and retention by investment social support programs, so one can ultimately bring about a more effective and long-lasting workforce.

6.0 Recommendations:

1. Organizations should work to Reduced Tiredness, Feelings of fatigue or burnout can be lessened by having a supportive team or supervisor at work, among other forms of social support. Resources, encouragement, and understanding are all things that supportive environments may offer, and they can all help reduce the stress that leads to fatigue.
2. Organizations should focus on Lower Turnover Intention since employees who experience support from their employers are less likely to wish to quit. This is due to the fact that social support can raise levels of engagement, job satisfaction, and general well-being, all of which lower the possibility that an employee will wish to look for work elsewhere.
3. Organizations should work to Enhanced Job Performance, Improved job performance might also be a result of social support. Employee motivation, engagement, and commitment to their work are increased when they feel encouraged, and this can lead to increased performance and productivity.
4. Organizations should focus on Improving Mental Health, work social support is associated with better mental health outcomes. Stress, anxiety, and depression are all factors that might lead to fatigue and inclination to turn over. It can assist lessen these sensations.
5. Employers who cultivate a culture of social support stand to gain from reduced absenteeism, increased employee retention rates, and an all-around happier workplace.
