The Impact of Cosmetics Advertising on the Cultural Identity and Consumption Patterns of Kurdish Consumers

May – 2024

ABSTRACT

Cosmetics advertising performs a pivotal role in shaping client conduct and cultural identity, especially in regions where conventional and worldwide affects intersect. This study investigates the impact of cosmetics advertising and marketing on purchasing patterns and cultural identity amongst Kurdish college students inside the Kurdistan-Iraqi region. The studies hypothesized that cosmetics marketing drastically impacts consumption styles and cultural identity, with versions throughout distinct demographic agencies, such as gender.

The study area is at the Kurdistan-Iraqi place, in which speedy modernization and Western influences coexist with conventional values. A sample of 118 students from Komar university provided information thru a dependent survey administered through Google paperwork. The records were analyzed the usage of various statistical techniques, inclusive of reliability checks, t-tests, correlation analyses, and regression fashions.

The results indicated robust internal consistency within the survey devices and huge, superb correlations between cosmetics marketing impact, intake styles, and cultural identification. unbiased-samples t-tests found out amazing differences among male and woman members of their responses to cosmetics advertising, with girls reporting stronger advertising influences. Regression analyses showed that each consumption patterns and cultural identification appreciably stimulated the perceived effect of cosmetics advertising, though the fashions explained simplest a portion of the version, suggesting other contributing factors.

A recommendation from this examine is that marketers must increase culturally touchy advertising and marketing strategies that align with Kurdish norms and values to foster high-quality engagement and build believe among consumers. those strategies will help agencies higher resonate with their audience at the same time as helping knowledgeable and culturally congruent shopping conduct

1.0 Introduction

A wide range of values, beliefs, norms, and traditions make up national culture (Hong & Lee, 2014). These factors have a big impact on a lot of different things, like industry dynamics (Kanagaratnam et al., 2020), technological usage (Choi et al., 2014), and marketing strategies (Song et al., 2018; Vergamini et al., 2019; Zim and-Sheiner et al., 2019). To illustrate the effect of cultural congruence on customer happiness, Song et al. (2018) performed a regression study on customer reviews of entertainment products across several cultural marketplaces.

Using a combined research technique, Vergamini et al. (2019) highlighted the significance of cultural identity in influencing wine sector marketing tactics in Italy. Zim and-Sheiner et al. (2019) investigated how ethical perspectives on online advertising differed among countries, demonstrating how ethical philosophies affected consumer views. Furthermore, Kanagaratnam et al.'s (2020) analysis of the connection between national culture and consumer loyalty showed how structural factors influence loyalty trends.

Additionally, Cowan and Spielmann (2018) looked at identity confirmation in travel-related ads and came to the conclusion that cultural congruence improves appeal and favorable marketing reactions. Globalization and standardized marketing techniques put pressure on national cultures as they change over time (Sasaki & Yoshikawa, 2014), especially in changing economies (Morais & Ferreira, 2020; Song et al., 2018).

One prominent example is the Kurdistan-Iraqi Region, which is rapidly modernizing and going through cultural changes as a result of economic growth (BBC, 2018). These changes illustrate the dynamic character of culture influenced by both natural and artificial influences, leading to studies into generational disparities and cultural continuity among Kurds (Davis, 2005). (Looney, 2007).

With a valuation of more than $500 billion, the global cosmetics sector mostly depends on advertising to get into developing areas like Kurdistan, Iraq, where consumer behavior is shifting to more Western norms (Deutsche Welle, 2021). Therefore, the purpose of this study is to look at how cosmetics advertising affects Kurdish cultural identity and purchasing patterns.

1.1 Context of Study

e phenomenon of national culture is a complex layer of values, beliefs, norms, and traditions (Hong & Lee, 2014). There is a significant body of research examining the impact of national culture on

the choice of marketing strategies (Song, Moon, Chen & Houston, 2018; Vergamini, Bartolini, Prosperi & Brunori, 2019; Zim and-Sheiner, Ryan, Kip & Lahav, 2019), technological usage (Choi, Lee, Sajjad, & Lee, 2014), industry structure (Kanagaratnam, Bray & Robson, 2020) and related constructs. For instance, Song, Moon, Chen & Houston (2018), used a regression model to explore the relationship between national culture and marketing strategy, the study analyzed consumer reviews of 260 movies in 25 country markets in entertainment products in rich cultural content focusing on how these factors influence satisfaction ratings among these customers. The authors noted that cultural congruence between product and market affects customer reviews. 3 Using a mixed quantitative and qualitative research approach in Italy to investigate the wine industry, Vergamini, Bartolini, Prosperi & Brunori (2019) noted that the use of diversification strategies and multiple marketing channels is crucial in ensuring success of companies and this is dependent on the cultural identity developed in the first place among customers. Zim and-Sheiner, Ryan, Kip & Lahav (2019) used an exploratory research design in the media and advertising industry to explore the adolescent's perceptions and ethical attitudes toward online native advertising in US, Turkey, and Israel. The study showed that ethical principles or philosophies may influence people's attitudes towards advertising. Similarly, a study by Kanagaratnam, Bray & Robson (2020) used thematic analysis to examine the relationship between national culture and customer loyalty in United Kingdom and Sri Lanka, the results showed that in both countries structural elements such as retailer focus and positioning exert a considerable degree of influence on customer loyalty, resulting in different loyalties. Furthermore, Cowan and Spielmann (2018) conducted a study in the US to comprehend identity confirmation in tourist advertisement, they examined how consumers evaluate tourism advertisements based on their cultural similarity, cultural identity, and self-confirmation. They arrived at the conclusion that advertisements that fail to match consumers' cultural identity are perceived as unattractive and cause negative marketing responses.

National cultures are never static (Sasaki, & Yoshikawa, 2014) and research on global culture has indicated that the internationalization of enterprises with related marketing campaigns, globalization, 'Westernization' of business, and the application of standardized (Western) marketing tools have had an impact on national culture (Morais & Ferreira, 2020; Song, Moon, Chen, 2018). The issue of culture being impacted by marketing pressures has been found to be more apparent in (non-Western) countries that have rapidly evolved from a traditional society with a closed economy to being open to the international community to spur modernization of the

economy (Kesey, & Biemans, 2016; Deleuze, 2019). One example of this is the Kurdistan-Iraqi Region, which is an autonomous Kurdistan region in the north of Iraq that is run by the Kurdistan Regional Government (BBC, 2018). Like other parts of the Middle East, the Kurdistan-Iraqi Region has undergone dramatic transformation in recent decades and has rapidly developed from a traditionally poor society to a largely modern, international, and leaning towards Westernized nation. Oil has been its main resources and economic change, and 4 modernizations very quickly affected the lifestyle and cultural identity of this largely traditional Islamic society (BBC, 2018). The younger generation grew up in this traditional but western society, but their parents grew up in a completely different culture (Davis, 2005). These dramatic changes have been the primary force for this research to be conducted to study and comprehensively understand the multiple generations of the Kurds (which is being used here to refer to those Kurds in the Kurdistan-Iraqi Region, although it is understood that the Kurds are an ethnic and linguistic group across Iran, Syria, Turkey, and Armenia as well, Britannica, 2021). Culture is expected to change over time due to a combination of natural influences and environmental artificial forces. For example, Looney (2007) argues that the rise of globalization has created a difference in how global pressure manifests itself in different regions. For example, to a Westerner, this example of pressure may be one that is strictly commercial and one that questions the implications of excessive consumerism. However, the same can be interpreted differently in the Middle East, where there is an expectation of how the rise in the presence of high street outlets and Western fast-food brands is changing the cultural identity, traditional history, and national ties to regional partnerships. Opposition to the impact of the rising Western influence has been acknowledged by the people.

The global cosmetics industry is one of the most rapidly growing and lucrative industries in the world, with a market value of over $500 billion in 2021 (Statista, 2021). The industry is characterized by intense competition, with companies constantly seeking new and innovative ways to attract consumers and gain market share. Advertising is a crucial tool for companies to promote their products and build brand awareness, particularly in emerging markets where consumers are less familiar with the products and the brand. The Kurdish market in the Kurdistan-Iraqi region is an emerging market for cosmetics companies and has attracted the attention of foreign companies seeking to expand their market share. The Kurdish market is characterized by a growing middle class with increasing disposable income, and a desire to adopt Western lifestyles and consumption patterns (Deutsche Welle, 2021). Cosmetics advertising by foreign companies has played a significant role in shaping the consumption patterns 5 and cultural identity of Kurdish consumers,

raising questions about the impact of such advertising on traditional Kurdish cultural practices and values. This research aims to analyze the impact of cosmetics advertising on the cultural identity and consumption patterns of Kurdish consumers in the Kurdistan-Iraqi region. The research objectives are threefold: first, to analyze the content and frequency of cosmetics advertising by foreign companies in the Kurdish market, and to investigate how this advertising influences the consumption patterns of Kurdish consumers through surveys and focus groups. Second, to examine the cultural values and norms that are represented in cosmetics advertising by foreign companies, and to evaluate how these values and norms align with or contradict traditional Kurdish cultural values and norms, through content analysis and surveys. Finally, to investigate how demographic factors such as age, gender, income, and education level moderate the impact of cosmetics advertising on the consumption patterns of Kurdish consumers, through regression analysis and surveys. The research questions that guide this study are as follows: To what extent does exposure to cosmetics advertising by foreign companies impact the consumption patterns of Kurdish consumers, and what are the main factors driving this impact? How do Kurdish consumers perceive the cultural values and norms represented in cosmetics advertising by foreign companies, and to what extent do these perceptions influence their cultural identity and consumption patterns? How does the impact of cosmetics advertising on the consumption patterns of Kurdish consumers vary across different demographic groups, and what are the underlying reasons for these variations? By addressing these research questions and objectives, this study will contribute to a better understanding of the impact of cosmetics advertising on the cultural identity and consumption patterns of Kurdish consumers in the Kurdistan-Iraqi region. The findings of this study can inform marketing strategies for cosmetics companies operating in this market and can also contribute to the development of policies and regulations that protect traditional Kurdish cultural practices and values.

1.2 Research question.

To what extent does exposure to cosmetics advertising by foreign companies impact the consumption patterns of Kurdish consumers, and what are the main factors driving this impact?

1.3 Aim

Analyze the impact of cosmetics advertising on cultural identity and consumption patterns of Kurdish consumers in Kurdistan-Iraq.

1.4 Objectives

1. Analyze content and frequency of cosmetics advertising by foreign companies in Kurdish market and assess its influence on consumption patterns.
2. Examine cultural values and norms represented in cosmetics advertising by foreign companies and evaluate alignment or contradictions with traditional Kurdish cultural values.
3. Investigate demographic factors (age, gender, income, education) moderating the impact of cosmetics advertising on consumption patterns among Kurdish consumers.

1.5 Hypotheses

H1: Cosmetics advertising by foreign companies has a significant impact on the consumption patterns of Kurdish consumers, leading to a growing preference for foreign cosmetics brands.

H2: Cosmetics advertising influences the cultural identity of Kurdish consumers and culture norms.

H3: The impact of cosmetics advertising on cultural adaptation of the consumers .

1.6 Framework of the study

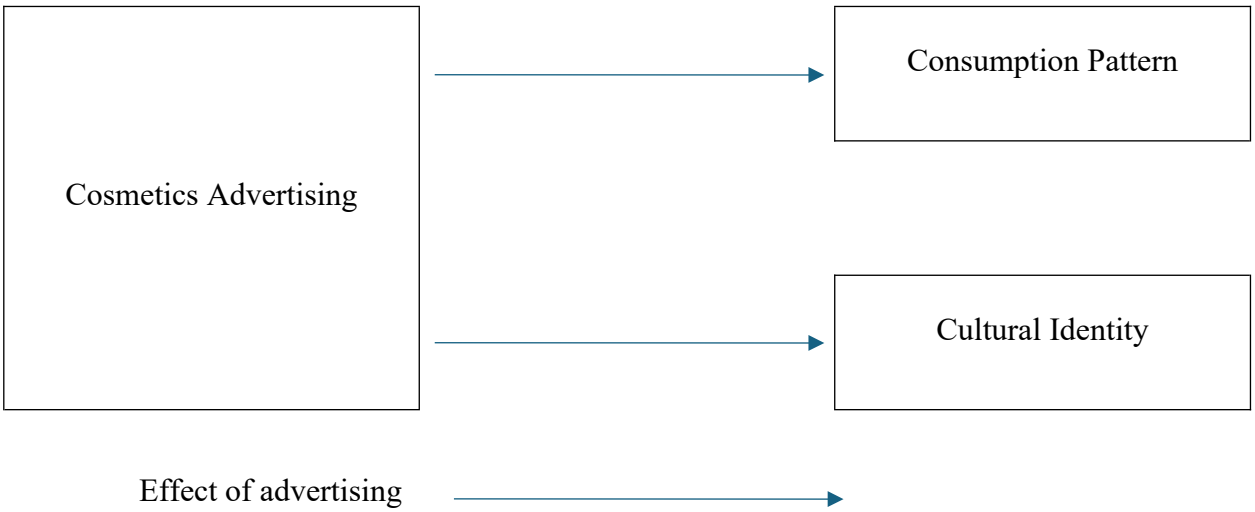

Figure 1 Framework of the research.

2.0 Literature Review

2.1 Introduction

This section of the proposal reviews existing literature on the impact of cosmetics advertising on cultural identity and consumption patterns, with a focus on Kurdistan. It explores the intricate relationship between cultural identity, social status, and the consumption of cosmetics products, moderated by various demographic factors. Vergamini, Bartolini, Prosperi, and Brunori (2019) used a mixed quantitative and qualitative research approach to study the wine industry in Italy and found that using diversification strategies and multiple marketing channels is essential to a company's success, and that this is dependent on the customers' initial development of a cultural identity. To investigate teenage perceptions and ethical attitudes towards online native advertising in the US, Turkey, and Israel, Zim and-Sheiner, Ryan, Kip, and Lahav (2019) used an exploratory study design in the media and advertising business. The study demonstrated how people's views towards advertising might be influenced by ethical concepts or philosophies. Similarly, Kanagaratnam, Bray, and Robinson's (2020) study using theme analysis to investigate the connection between national culture and patronage in the United Kingdom and the findings for Sri Lanka demonstrated that structural factors like retailer emphasis and positioning have a significant impact on consumer loyalty in both nations, leading to varying levels of loyalty. Additionally, to understand identity confirmation in tourism ads, Cowan and Spielmann (2018) carried out a study in the US. They looked at how consumers assess advertisements based on self-confirmation, cultural resemblance, and cultural identity. They concluded that ads that don't align with the cultural identity of the target audience are seen negatively and elicit unfavorable marketing reactions. The Kurdistan-Iraqi Region, like other regions of the Middle East, has experienced a tremendous metamorphosis in recent decades, evolving quickly from a traditionally impoverished society to a mainly modern, multinational, and Westernizing country. Its primary resource has been oil, and economic transformation and modernity have had a swift impact on the way of life and cultural identity of this predominately conservative Islamic culture (BBC, 2018). Although their parents were raised in a quite different culture, the younger generation was raised in this traditional but Western society (Davis, 2005). The main impetus behind this research's conduct to examine and fully comprehend the many generations of Kurds—hereafter referred to as those in Kurdistan, Iraq—has been these profound shifts.

2.2 Cultural identity and cosmetics consumption in Kurdistan

2.2.1 Overview of Kurdish cultural identity

Kurdish cultural identity is rich and multifaceted, reflecting a long history of tradition, resilience, and diversity. The Kurds have maintained a distinct cultural identity despite the geopolitical challenges they have faced.

care products publicizing has filled in unmistakable quality and impact in worldwide buyer culture. In different settings, the effect of such publicizing on shoppers' social characters and utilization designs has been broadly considered. Notwithstanding, the writing regarding the matter is scant as far as its application in Kurdistan. The motivation behind this writing audit is to research the effect of beauty care products publicizing Kurdish shoppers' social personality and utilization designs. The audit will examine the hypothetical systems that support the investigation of beauty care products publicizing what's more, social character, as well as the specific setting of beauty care products promoting in Kurdistan. Moreover, the survey will explore directing elements that might impact the effect of beauty care products promoting on Kurdish shoppers. At long last, the survey desires to add to a superior comprehension of the perplexing connection between beauty care products publicizing, social personality, and Kurdish utilization designs. 2.2 Social personality and beauty care products utilization in Kurdistan 2.2.1 Outline of Kurdish social personality Kurdish social personality is a complicated and complex idea formed by an assortment of verifiable, political, and social variables. Kurds are a Center Eastern ethnic gathering who live fundamentally in Turkey, Iraq, Iran, and Syria. Kurdish culture is recognized for its long history, language, writing, music, and cooking. Kurdish society is transcendently Muslim, with Sunni Islam being the prevailing religion, however Kurdish followers of different religions like Christianity, Yezidism, and Zoroastrianism exist. The area's set of experiences of colonization, minimization, and mistreatment has molded Kurdish social identity. As indicated by studies, such encounters significantly affect social character, prompting sensations of misfortune, discontinuity, and a longing to protect one's social personality. Aydin also, Guney, for instance, contend that approaches of constrained movement and absorption have served to save Kurdish social personality. (Aydinli and Guney, 2016). Additionally, Abdi and Karim 7 found in their concentration.

2.2.2 Ethnic and Public Personality Subsequently,

It is basic to characterize and fathom ethnic and public personality. Licsandru and Cui (2019) characterized ethnic way of life as a part of social personality, characterized as a "cycle of selfidentification with an ethnic gathering with whom the singular offers comparative ethnic qualities." (p.263) Reed, Forehand, Puntoni, and Warlop (2012) characterized way of life as any classification mark with which a purchaser self-recognizes that considers a reasonable image of what an individual in that classification seems to be, thinks, feels, and does. Considering more extensive contextualization and covering ethnic qualities, social personality hypothesis' conceptualization of ethnic character stretches out past a sense of having a place with a particular ethnic gathering. (Harrison, Thomas, and Cross, 2015). This makes the term "social personality" more appropriate to the issue viable while likewise eliminating the requirements related with ethnic personality. Kranz and Goedderz (2020) characterized the two terms as equivalent, portraying social way of life as an assortment of local area impacted conduct rehearses and perspective convictions. Public character, then again, is a feeling of unity with the country and people who know about and feel a feeling of having a place with a country. (Carvalho, Luna, and Goldsmith, 2019). This sort of self-public classification understanding is for the most part communicated by people to other people who are viewed as outcasts. Besides, as indicated by Zschocke (2013's) research on public character, ads that are not like public personality might show up threatening and unappealing in view of personality endorsing decisions. Individual characters are multilayered, enveloping both individual and social personality. Public connection and culture have the most prominent impact on friendly personality. As indicated by research on friendly character, public culture can show or shape personality affirmation, which relates to self-origination and self-discernment. (Gomez and Torelli, 2015; Torelli and Cheng, 2011; White and Dahl, 2006; White, Argo, and Sengupta, 2012). Terhune (1964) partners the concept'ssocial personality' with a social clinician local area, as a component of the person's self-concept known as public character. Public personality engages people by permitting them to 8 self-characterize and be viewed as comprehensive inside their local area, embracing an aggregate feeling of local area that is particular from different countries. (Ariely, 2012, p. 462). Ethnic, social, regional, monetary, and legitimate political factors all assume a part in deciding a singular's public personality. Such pervasive personality structures empower people to foster a credible identity and better grasp their own convictions, thought processes, values, mentalities, and conduct. (Smith, 1991). This is a charming speculation since it mirrors the philosophy that people can continually rethink their

characters, changing the story of personality. This is a significant focal point for this exploration to comprehend the progressions in social character brought about by beauty care products ads in Kurdistan.

2.2.3 Beauty care products publicizing

personality and utilization designs Publicizing is a useful asset for impacting customer perspectives, discernments, and ways of behaving. Beauty care products publicizing, specifically, altogether affects buyers' social personalities and buying propensities. Beauty care products publicizing habitually advances magnificence standards considering Western guidelines, which can altogether affect the self-discernment, social personality, and utilization conduct of non-Western customers. Notice is a basic instrument on which beauty care products advertisers depend vigorously. From a financial outlook, promoting is a method for imparting a message to an enormous crowd, and it is a powerful method for focusing on the majority through social data. (Kim et al., 2013; Jan et al., 2019). However, ads, as per (Bennett, 2015), can escort blended profound allure, people might answer distinctively if a similar promotion is depicted. There are various factors that should be viewed as to appreciate individuals' responses to advertisements. People's psychological state, social character, age, and character are the most persuasive attributes. (Shareef et al., 2017). While there are no all-around acknowledged kinds of promotion, it is normal to order commercials considering their geological dissemination, interest group, item or administration type, and purchaser improvements. (Ruchi, 2012). These are expansive classifications of promotion, and this review is essentially worried about the geological reach of beauty care products organizations' advancements. 9 Nearby, public, and worldwide promoting bunches are recognized by the topographical spread classification. (Warner, 2011). To satisfy the necessity for unique exploration in the field, the proposed examination will look at how individuals in Kurdistan deliberately draw in with worldwide restorative brands, as far as how well they feel it matches their feeling of character on the planet, and how that personality might have been formed by the advertising of these items. There is broad advertising of corrective items (Wu and Lee, 2016; Pathak and Nichter, 2018; Singhal and Malik, 2018), yet apparently there are two likely holes: little thought of how this associate with public character, and little assessment of the Kurds as a particular exploration climate. Yu (2020) led research on the general promoting of beauty care products and found that beauty care products organizations really like to utilize a multi-station publicizing procedure, depending on special devices like TV advertisements, web-based entertainment, printed publicizing, logical promoting, and email showcasing. Lin and Fu (2018)

affirmed the adequacy of web-based publicizing utilizing 345 legitimate client reactions in the cleanser, body cleanser, and conditioner item classes. Notwithstanding, the model created by these analysts showed the way that web-based publicizing could expand the deals of beauty care products organizations if their disconnected presence was solid. Väisänen (2019) raised the issue of deceiving promotion in the makeup business and proposed administrative answers for address it. These discoveries show that advertising guarantees, as well as their validity, are seen through a social focal point. As per studies, beauty care products publicizing altogether affects buyers' perspectives toward magnificence principles, confidence, and buying propensities. Consumers presented to corrective notices will quite often consume more, with an inclination for unfamiliar brands furthermore, items. Besides, the degree to which promotions line up with or go against customary social qualities and standards impacts the effect of beauty care products publicizing on social personality and utilization designs. Various examinations have been directed to explore the impact of beauty care products publicizing on social character and utilization designs. Kim and Sung (2017) found, for instance, that the apparent validness of restorative ads impacts the connection between social personality and utilization conduct. Additionally, Seidman and Tyebjee (2017) examined how Middle Easterner ladies' social characters shape their mentalities toward corrective advertisements. Wang and associates (2020) examined how beauty care products promoting influences Chinese purchasers' self-insight and utilization conduct. These and different examinations demonstrate 10 that beauty care products publicizing altogether affects customers' social personalities and buying habits. Appropriately, the main speculation is: H1: Beauty care products publicized by unfamiliar organizations has a sign.

2.3 Impact of cosmetics advertising on cultural identity and consumption patterns

2.3.1 Content analysis of cosmetics advertising in Kurdistan

A content analysis reveals that cosmetics advertising in Kurdistan often features themes of modernity and Western beauty standards, which may contrast with local cultural values and norm.

2.3.2 Social status, cultural identity, and foreign cosmetics brands

The preference for foreign cosmetics brands is intertwined with social status and cultural identity, where such brands are perceived as symbols of modernity and social prestige.few exploration in most recent years have featured the impact of abroad beauty care products makers on purchaser conduct in developing countries, including Kurdistan. (Kordnaseri et al., 2020; Wang & sun, 2019). Those brands are frequently connected with social notoriety and status, as well as being seen as images of innovation, refinement, and up portability. (Choi et al., 2017). This insight is built up through abroad beauty care products associations' promoting and showcasing procedures, which every now and again trademark Western models and underscore the utilization of cutting-edge innovation and elements. (Wang and sun oriented, 2019). besides, studies have demonstrated that unfamiliar beauty care products promoting and showcasing meaningfully affects Kurdish clients' utilization styles, bringing about a creating decision for abroad beauty care products makers and items and a lower inside interest in conventional Kurdish beauty care products rehearses and stock (hypothesis 1). (Sulaiman and Jamal, 2020; Wang and sun, 2019). This shows that the promoting techniques of unfamiliar beauty care products organizations are strong in forming client direct in Kurdistan. Yet, the effect of unfamiliar beauty care products publicizing on Kurdish customers' social personality is roused with the guide of how pleasantly the plugs line up with or go against conventional Kurdish social values and standards (theory 2). (Kordnaseri et al., 2020). This shows the significance of social qualities and standards in molding buyer direct, despite strong promoting messages. Also, segment factors which incorporate age, orientation, benefits, and preparing degree gentle the impact of beauty care products publicizing and advertising on Kurdish shoppers' utilization designs (hypothesis 3). (Choi et al., 2017; Sulaiman and Jamal, 2020). for instance, more energetic, young lady, better-benefits, and more proficient buyers are significantly more prone to pick unfamiliar beauty care products makers and product. standard, these discoveries shed gentle on the effect of beauty care products publicizing on client conduct in Kurdistan, featuring

the requirement for additional investigations on this area. The impact of promoting on supporter lead has been a subject of revenue in showcasing research for various quite a while. thirteen Scientists have concentrated on the impacts of promoting and advertising on assorted elements of supporter conduct, comprising of perspectives, convictions, and purchase expectations (Shimp, 2010). As of late, there was a creating side interest in data what promoting means for social personality, uncommonly inside the setting of globalized markets. Beauty care products publicizing and promoting has been perceived as a particularly remarkable area for exploring the effect of showcasing on social distinguishing proof, as beauty care products are frequently connected to social standards and values (Graham and Kane, 2018). promoting for beauty care products items frequently comprises of photographs and messages that bring social and social implications, alongside messages roughly magnificence, orientation, and social notoriety (Stiles and Rayner, 2019). Inside the setting of Kurdish clients, there might be a rich social foundation of conventional beauty care products practices and products that could affect their mentalities and ways of behaving towards unfamiliar beauty care products makers. Yet, the amount to which those conventional qualities furthermore, standards influence the impact of beauty care products promoting on social recognizable proof has yet to completely be explored. thus, the second one hypothesis is: H2: The impact of beauty care products publicizing on the social distinguishing proof of Kurdish buyers is energized with the guide of the degree to which the commercials line up with or go against customary Kurdish social qualities and standards.

2.3.3 Contradiction between traditional values and Western beauty standards

There is a palpable tension between adherence to traditional values and the adoption of Western beauty standards, facilitated by cosmetics advertising. This tension reflects broader cultural negotiations and transformations within Kurdish society.

This literature review highlights the complex interplay between cosmetics advertising, cultural identity, and consumption patterns in Kurdistan. It underscores the need for further research to understand the nuanced ways in which Kurdish individuals negotiate their cultural identity in the face of global and local influences. The reviewed literature, including works by Hoch et al. (2018) on leadership styles beyond transformational leadership and Patterson (2013) on theoretical.

3.0 Methodology

The by using the quantitative methods from a questionnaire that we have collected for the three variables that we have and using ANOVA style hypothetical testing with statistical package for social sciences SPSS V.26, 5 questions per each variables you will take the mean of the five questions and then we can do the analysis of affect and regression on the variables and see if we have an effect of advertising on the cultural norms adaptations has been collected on Komar university students and the sample population is 118 using Google form as a interface for collecting the data and then excel for modeling the data then analyzing it

4.0 Results

First things do to in analyzing the data is testing the reliability of the data that we have collected using alpha test and from that we can take the next step of analyzing it and working with it, if the data it is not reliable we are better off not use it or do any other test on it since at that time we will get not accurate bad results that are not relevant or it does not relate to the hypothesis since it may not show the correlation or the relationship between the variables but in reality it is not like that Usually, the process involves data entry, data cleaning, and data editing. The above-mentioned steps help to produce data that is prepared for analysis. Following these protocols is essential while processing data since inaccurate data might result in incorrect analysis and conclusions, which could undermine the objectives of the study and push the researcher to make bad choices.

4.1 Missing data and fault response

Outliers and missing values are frequently discovered during the data collection stage of observational or experimental investigations. Among other things, nonresponses, participant withdrawals, and data loss can all lead to missing values. A smaller sample size than anticipated is caused by missing values, which ultimately calls into question the validity of the study's conclusions. Conclusions about a population drawn from such a sample may also produce skewed results, which would undermine the reliability of the data. To find missing data, the frequency distributions approach in the SPSS v26 application was utilized to see if any data numbers were lost. The data was full and contained no gaps. So, it makes it easier for the researchers to carry out the remaining trials.

4.2 Reliability Test

From table 1 we can see that the results of the reliability for Cosmetics Advertising (CA) that it has a score of .847 A measure of scale reliability, or how closely connected a group of things is to one another, is Cronbach's Alpha. With a Cronbach's Alpha of 0.847 , our scale has a good degree of internal consistency, indicating that the items accurately capture the underlying concept. An alpha of 0.8 or above is generally regarded as acceptable, and values beyond 0.8 are good. This speaks well of the survey instruments employed in this investigation.

Table 1 Reliability test for CAI, CI and CP

Reliability Statistics

Variables	Cronbach's Alpha	N of Items
Cosmetics Advertising Impact	.874	5
Consumption pattern	.764	5
Cultural Identity	.847	5

The internal consistency of the survey scales employed in the study is thoroughly evaluated in the reliability statistics table. Every scale assesses a different concept, and Cronbach's Alpha is used to assess the reliability of each scale. With a Cronbach's Alpha of 0.874, the cosmetics advertising scale has strong internal consistency among its five questions, indicating that these items are interrelated and reliably gauge the influence of cosmetics advertising. The consumption pattern scale's five items appear to be sufficiently connected to reliably assess the construct, as evidenced by its satisfactory level of internal consistency (Cronbach's Alpha of 0.764). Comparably, the scale measuring cultural identification has a high degree of internal consistency (Cronbach's Alpha = 0.847), meaning that the five items Measure this construct consistently. These reliability values, which range from acceptable (0.764) to high (0.874), demonstrate the validity of the survey instruments utilized overall. All three scales exhibit satisfactory levels of internal consistency. This confirms the use of these items for precisely evaluating cosmetics advertising, consumption patterns, and cultural identity in this study and supports the validity of the data acquired.

4.3 Demographic analyses

The demographic traits of the members in this look at offer treasured context for know-how the effect of cosmetics advertising on Kurdish cultural identification and shopping styles. a complete of 117 individuals participated, and the gender distribution was skewed in the direction of girls, with 78 ladies (66.7%) and 39 guys (33.3%). This distribution shows a tremendous female illustration, which aligns with the research focus on cosmetics marketing, as ladies historically form a good-sized patron base inside the cosmetics enterprise.

The age distribution turned predominantly younger, with 105 participants (89.7%) falling inside the 18 to 25-yr-old class. Nine members (7.7%) have been inside the 26 to 30-yr-antique institution, and the most effective three (2.6%) were inside the 31 to 40-year-antique class. This substantial illustration of young adults probably reflects the observer's focus on a pupil populace, wherein younger individuals are greater at risk of the influence of worldwide advertising traits, which includes cosmetics advertising.

concerning marital repute, many contributors (one hundred and five people or 89.7%) had been single, while most effective 12 (10.3%) were married. This fashion is consistent with the age distribution, as most members were young adults probably pursuing a better education and less probably to be married.

The expert status of individuals additionally aligns with the predominance of more youthful people, with one hundred individuals (85.5%) figuring out as college students. This

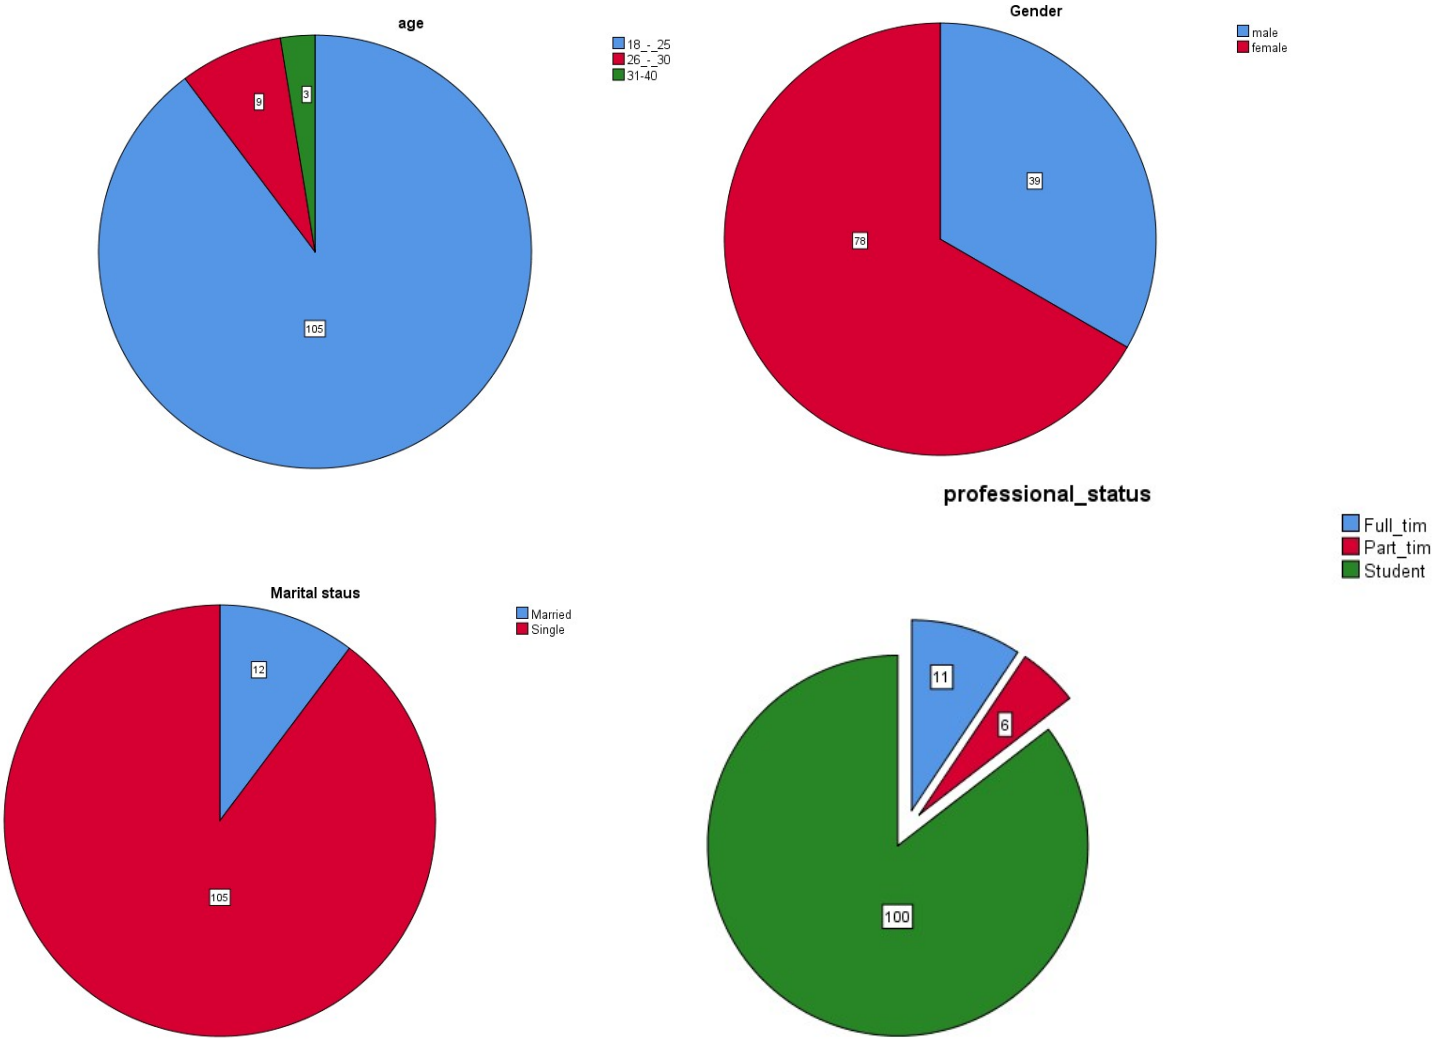
student populace substantially outweighed other categories, with only 11 contributors (9.4%) employed complete-time and 6 members (5.1%) working component-time.

demographics display that the look at changed into performed usually amongst a student populace consisting in large part of younger, unmarried, female participants. This demographic makeup provides essential context for analyzing how cosmetics marketing influences cultural identification and intake styles amongst Kurdish students. The predominantly younger and lady composition suggests a collection more attuned to global beauty traits and probably greater influenced by way of Western cosmetics advertising strategies as shown in table 2

Table 2 Demographics

demographics	categories	Frequency	Percent
Gender	male	39	33.3%
	female	78	66.7%
age	18 – 25 years	105	89.7%
	26 – 30 years	9	7.7%
	31 – 40 years	3	2.6%
Marital status	Married	12	10.3%
	Single	105	89.7%
professional status	Fulltime	11	9.4%
	Parttime	6	5.1%
	Student	100	85.5%

Figure 2 Picart of demographics.



4.4 Correlation Analysis

4.4.1 Pearson correlation

The correlation evaluation outcomes offer a comprehensive knowledge of the relationships between the median rankings of three key variables: Cosmetics Advertising Impact (CAI), Consumption Pattern (CP), and Cultural Identity (CI)). Using Pearson correlation coefficients, we are able to quantitatively verify the electricity and course of those relationships whilst know-how their statistical importance at distinctive stages. The results not handiest spotlight the interconnectedness of these variables but also provide insights into how cosmetics advertising is influencing consumer conduct and cultural identification formation.

the primary variable, Cosmetics Advertising Impact (CAI), reveals a superb correlation with intake pattern (CP), indicated through a coefficient of 0.213. This dating, although susceptible, is statistically widespread on the 0.05 stage with a p-value of zero.021. The fine correlation means that because the perceived impact of cosmetics advertising will increase, it has a corresponding influence on consumption patterns. moreover, CAI shows a greater suggested high-quality correlation with Cultural identification (CI), displaying a coefficient of 0.308. This relationship is statistically widespread at the zero.01 level, with a p-value of zero.001. This more potent relationship suggests that an boom in the effect of cosmetics advertising is related to significant modifications in cultural identity. As marketing influences come to be extra suggested, it begins to form individuals' cultural identities, likely aligning them more closely with the beliefs portrayed in the advertising and marketing.

Consumption Pattern (CP) itself demonstrates a outstanding fine correlation with Cultural identity (CI), with a coefficient of 0.429. that is statistically considerable on the zero.01 degree, as evidenced via the p-value of 0.000. The stronger relationship between consumption patterns and cultural identification shows that shifts in how people eat products are more intricately linked to their cultural identities. As intake patterns evolve, they have a direct effect on how people understand and shape their identities within the context of cosmetics and splendor standards.

The very last variable, Cultural Identity (CI) maintains effective correlations with both CAI and CP, reinforcing the interconnected nature of the effect of cosmetics advertising and marketing,

consumption patterns, and cultural identification formation. The fantastic relationships throughout those variables underscore the complex linkages between advertising's affect, evolving customer behaviors, and the reshaping of cultural norms and identities. The correlation evaluation findings provide a foundation for information the transformative energy of advertising in shaping now not best what humans purchase but also how they perceive themselves culturally. As shown from table 3

Table 3 Pearson Correlation

Correlations

		CAI	CP	CI
CAI	Pearson Correlation	1	.213*	.308**
	Sig. (2-tailed)		.021	.001
	N	117	117	117
CP	Pearson Correlation	.213*	1	.429**
	Sig. (2-tailed)	.021		.000
	N	117	117	117
CI	Pearson Correlation	.308**	.429**	1
	Sig. (2-tailed)	.001	.000	
	N	117	117	117

*. Correlation is significant at the 0.05 level (2-tailed).

**. Correlation is significant at the 0.01 level (2-tailed).

correlation evaluation underscores the widespread impact that cosmetics marketing has on both intake patterns and cultural identity. even as marketing without delay influences each construct, consumption patterns appear to play a vaster mediating role in how marketing translates to shifts in cultural identity. The interconnectedness of these 3 variables demonstrates that cosmetics advertising and marketing, by using appealing to fashionable ideals and splendor standards, contributes to major changes in how individuals devour merchandise and how they understand their cultural identity. those findings are crucial for expertise the wider implications of advertising and marketing in influencing customer behavior and shaping cultural norms, mainly in areas in which Western splendor requirements are increasingly more gaining prominence.

4.4.2 Kendall's Taub and Spearman's rho analysis

correlation assessment underscores the widespread impact that cosmetics advertising has on each consumption patterns and cultural identity. even as advertising and marketing at once affects every assemble, intake patterns appear to play a vaster mediating function in how advertising translates to shifts in cultural identity. The interconnectedness of those three variables demonstrates that cosmetics marketing and advertising, by means of the use of attractive to trendy beliefs and splendor requirements, contributes to primary changes in how individuals devour merchandise and how they apprehend their cultural identification. the ones findings are crucial for expertise the wider implications of marketing and advertising in influencing purchaser behavior and shaping cultural norms, especially in regions wherein Western splendor necessities are increasingly more gaining prominence. As shown in table 4

Kendall's tau-b Correlations:

- CAI and CP: The correlation coefficient among CAI and CP is 0.177, that is statistically considerable on the 0.05 stage (p = 0.025). even though the connection is vulnerable, it indicates that a higher impact of cosmetics advertising is associated with shifts in intake styles.
- CAI and CI: The correlation between CAI and CI is stronger, with a coefficient of 0.251. This relationship is statistically full-size at the zero.01 level (p = 0.002). The fantastic correlation indicates that cosmetics advertising has a greater sizeable effect on cultural identity, that means that marketing directly impacts how people perceive their cultural affiliations and norms.
- CP and CI: The correlation coefficient between CP and CI is 0.382, that is great on the zero.01 degree (p = 0.000). This stronger nice courting exhibits that adjustments in consumption styles are intently related to shifts in cultural identity.

Spearman's rho Correlations:

- CAI and CP: The Spearman correlation among CAI and CP is 0.189, giant at the zero.05 degree (p = 0.041). This vulnerable positive relationship confirms that a within the effect of cosmetics advertising and marketing has a minor however statistically vast impact on consumption styles.
- CAI and CI: The correlation between CAI and CI is 0.287, extensive at the 0.01 level (p = 0.002). The effective correlation reinforces the concept that cosmetics advertising extensively influences cultural identity.
- CP and CI: The correlation coefficient between CP and CI is 0.420, sizeable on the 0.01 stage (p = 0.000). This robust superb relationship suggests that as intake patterns evolve, cultural identity shifts more distinctly.

Table 4 Kendall's Taub and Spearman's rho correlation

Correlations

			CAI	CP	CI
Kendall's tau_b	CAI	Correlation Coefficient	1.000	.177*	.251**
		Sig. (2-tailed)	.	.025	.002
		N	117	117	117
	CP	Correlation Coefficient	.177*	1.000	.382**
		Sig. (2-tailed)	.025	.	.000
		N	117	117	117
	CI	Correlation Coefficient	.251**	.382**	1.000
		Sig. (2-tailed)	.002	.000	.
		N	117	117	117
Spearman's rho	CAI	Correlation Coefficient	1.000	.189*	.287**
		Sig. (2-tailed)	.	.041	.002
		N	117	117	117
	CP	Correlation Coefficient	.189*	1.000	.420**
		Sig. (2-tailed)	.041	.	.000
		N	117	117	117
	CI	Correlation Coefficient	.287**	.420**	1.000
		Sig. (2-tailed)	.002	.000	.
		N	117	117	117

*. Correlation is significant at the 0.05 level (2-tailed).

**. Correlation is significant at the 0.01 level (2-tailed).

each Kendall's tau-b and Spearman's rho correlations spotlight the complicated relationships between cosmetics advertising, consumption patterns, and cultural identification. while the relationships between CAI and the alternative variables are highly weak, they stay statistically huge, indicating that cosmetics advertising exerts a tangible have an impact on both intake styles and cultural identity. The sturdy correlations among intake styles and cultural identity advise that as intake behavior change, people' cultural identities additionally adapt, therefore. these consequences provide important insights into how advertising can reshape cultural norms and client behaviors in regions wherein Western beauty requirements and contemporary intake practices are becoming extra influential.

4.5 T test of individual variables

While doing the T test we chose the 2 deferent groups to measure the differences of mean in it and what is the best group to choose in this case other than gender since we have Male and Female that can haver 2 completely 2 different responses to the questions from the survey since our research variables are cosmetics advertisement and the results of the T-test look like this table bellow

Table 5 T-Test

Group Statistics

	Gender	N	Mean	Std. Deviation	Std. Error Mean
CAI	male	39	2.9231	.83932	.13440
	female	78	2.4103	.90361	.10231
CP	male	39	2.5385	.85367	.13670
	female	78	3.1282	1.02386	.11593
CI	male	39	2.8462	.77929	.12479
	female	78	3.2821	.89584	.10143

- Cosmetics Advertising Impact (CAI): The mean CAI score for males (2.9231) is higher than that for females (2.4103), with standard deviations of 0.83932 and 0.90361, respectively. The standard error mean values indicate the precision of these estimates. This suggests that men perceive the impact of cosmetics advertising differently from women.

- Consumption Pattern (CP): The mean CP score for males (2.5385) is lower than that for females (3.1282), with standard deviations of 0.85367 and 1.02386, respectively. This

indicates that women have different consumption patterns compared to men, likely due to variations in cultural identity or exposure to advertising.

- Cultural Identity (CI): The mean CI score for males (2.8462) is lower than that for females (3.2821), with standard deviations of 0.77929 and 0.89584, respectively. This finding implies that men and women have distinct perceptions of cultural identity as influenced by cosmetics advertising.

The group facts show variations in mean rankings between women and men throughout CAI, CP, and CI. those variations may be attributed to varying perceptions and behaviors associated with cosmetics advertising and consumption styles, inspired by societal norms and cultural identities precise to every gender institution. The t-take a look at effects assist to focus on sizeable differences between the 2 groups in terms in their responses to cosmetics advertising and its impact on their intake patterns and cultural identities.

Table 6 independent sample T-Test

Independent Samples Test

		Levene's Test for Equality of Variances		t-test for Equality of Means						
									95% Confidence Interval of the Difference	
		F	Sig.	t	df	Sig. (2-tailed)	Mean Difference	Std. Error Difference	Lower	Upper
CAI	Equal variances assumed	3.742	.056	2.962	115	.004	.51282	.17315	.16985	.85579
	Equal variances not assumed			3.036	81.328	.003	.51282	.16891	.17676	.84888
CP	Equal variances assumed	.158	.691	-3.097	115	.002	-.58974	.19041	-.96692	-.21257
	Equal variances not assumed			-3.290	89.477	.001	-.58974	.17924	-.94585	-.23363
CI	Equal variances assumed	1.577	.212	-2.587	115	.011	-.43590	.16848	-.76962	-.10217
	Equal variances not assumed			-2.711	86.229	.008	-.43590	.16081	-.75557	-.11623

The results of the independent-samples t-test offer a detailed assessment of imply scores between male and girl contributors throughout the variables Cosmetics advertising impact (CAI), consumption pattern (CP), and Cultural identification (CI). The evaluation consists of Levene's check for equality of variances and the t-check for equality of method. here's a breakdown of the outcomes:

Cosmetics advertising impact (CAI):

- **Levene's test:** F = 3.742, Sig. = zero.056
  - The importance degree of zero.056 is slightly above zero.05, so we assume equal variances for this variable.
- **t-take a look at for Equality of method:**
  - **identical Variances Assumed:** t = 2.962, df = one hundred fifteen, Sig. (2-tailed) = zero.004
    - **imply distinction:** 0.51282
    - **Std. blunders distinction:** 0.17315
    - **95% CI (lower-top):** 0.16985 - 0.85579
  - **equal Variances not Assumed:** t = 3.036, df = 81.328, Sig. (2-tailed) = zero.003
    - **mean difference:** 0.51282
    - **Std. mistakes distinction:** 0.16891
    - **95% CI (lower-higher):** 0.17676 - 0.84888

The t-check effects display a statistically huge difference in CAI among men and women, with males having a higher suggest CAI rating.

consumption sample (CP):

Levene's test: F = 0.158, Sig. = 0.691

- With a significance level of 0.691, we count on equal variances.
- **t-take a look at for Equality of means:**
  - **equal Variances Assumed:** t = -3.097, df = a hundred and fifteen, Sig. (2-tailed) = zero.002
    - **suggest difference:** -0.58974
    - **Std. blunders difference:** 0.19041
    - **ninety five% CI (decrease-higher):** -0.96692 - -0.21257
  - **identical Variances now not Assumed:** t = -3.290, df = 89.477, Sig. (2-tailed) = zero.001
    - **suggest distinction:** -0.58974
    - **Std. mistakes difference:** 0.17924
    - **95% CI (lower-upper):** -zero.94585 - -0.23363

The t-check results show a statistically significant distinction in CP among ladies and men, with girls having a better suggest CP score.

Cultural identification (CI):

- **Levene's check:** F = 1.577, Sig. = 0.212
    - With a significance degree of 0.212, we anticipate identical variances.
- **t-test for Equality of method:**
    - **equal Variances Assumed:** t = -2.587, df = a hundred and fifteen, Sig. (2-tailed) = 0.011
        - **suggest difference:** -0.43590
        - **Std. blunders distinction:** 0.16848
        - **95% CI (lower-top):** -0.76962 - -0.10217
    - **equal Variances no longer Assumed:** t = -2.711, df = 86.229, Sig. (2-tailed) = zero.008
        - **mean distinction:** -0.43590
        - **Std. mistakes difference:** zero.16081
        - **95% CI (decrease-upper):** -0.75557 - -0.11623

The t-test results show a statistically large distinction in CI among women and men, with women having a better suggest CI rating.

The impartial-samples t-check shows sizeable variations among male and lady corporations in the median scores for Cosmetics advertising effect, intake pattern, and Cultural identification. The findings suggest that women are greater affected by cosmetics advertising and show off stronger consumption styles and cultural identification associated with cosmetics than guys.

4.6 Linear regression

The regression evaluation reveals treasured insights into the relationship between the median rating for intake patterns (CP) and the median rating for cosmetics advertising impact (CAI). using the "input" technique, all variables were included simultaneously to assess their predictive energy.

model summary Interpretation:

The correlation coefficient (R) of .213 suggests a susceptible fine correlation among the predictor variable, CP, and the outcome variable, CAI. The R rectangular value of 0.halfway that the model explains simplest 4.5% of the variation in CAI. Adjusted R square (0.037) debts for the quantity of predictors, presenting a cultured estimate. The usual blunders of the estimate (0.89497) represents the standard deviation of the residuals, indicating the average distance between the observed and anticipated values of CAI.

ANOVA Interpretation:

The ANOVA analysis indicates that the regression version is statistically widespread, with an F value of 5.453 and a p-value of zero.021. The regression sums of squares (4.368) and the residual sum of squares (92.111) indicate the proportions of defined and unexplained variance, respectively. The statistical significance of the version (p-value < 0.05) means that there's a meaningful dating between CP and CAI.

Coefficients Interpretation

The unstandardized coefficient (B) of zero.193 way that for every unit increase in CP_, CAI is expected to boom via 0.193 devices. The standardized coefficient (Beta) of 0.213 indicates that the relationship between CP and CAI is superb and robust. The constant (intercept) of 2.016 is the anticipated cost of CAI when CP is zero.

The t-value of two.335 shows that the coefficient is statistically tremendous, with a p-fee of 0.021. This advantageous and statistically extensive dating famous that an boom in consumption styles ends in an growth inside the effect of cosmetics advertising.

usual, the regression analysis shows that intake styles have a huge effect on cosmetics advertising and marketing perceptions. The model is statistically giant, even though the R rectangular fee of 0.half shows that the version handiest explains a small portion of the variant in CAI. consequently, different factors can also play a function in influencing the perceived impact of cosmetics advertising as shown in table 7 .

Table 7 regression analyses for CP with CAI

Variables Entered/Removed a

Model	Variables Entered	Variables Removed	Method
1	CP b	.	Enter

a Dependent Variable: CAI

b All requested variables entered.

Model Summary				
Model	R	R Square	Adjusted R Square	Std. Error of the Estimate
1	.213a	0.045	0.037	0.89497

a Predictors: (Constant), CP

ANOVA a						
Model		Sum of Squares	df	Mean Square	F	Sig.
1	Regression	4.368	1	4.368	5.453	.021b
	Residual	92.111	115	0.801		
	Total	96.479	116			

a Dependent Variable: CAI

b Predictors: (Constant), CP

Coefficients a						
Model		Unstandardized Coefficients		Standardized Coefficients Beta	t	Sig.
		B	Std. Error			
1	(Constant)	2.016	0.256		7.879	0
	CP_median	0.193	0.083	0.213	2.335	0.021

a Dependent Variable: CAI

This regression evaluation examines the relationship among the median score for cultural identity (CI) and the median score for cosmetics advertising impact (CAI). right here's a detailed record based totally at the consequences supplied in the picture:

Variables Entered/Removed

The evaluation includes the predictor variable CI, representing the median rating for cultural identification, that is used to expect the structured variable CAI, representing the median rating for cosmetics marketing effect. The "input" technique ensures all variables are protected concurrently.

- structured Variable: CAI (Cosmetics advertising and marketing effect)
- Predictor Variable: CI (Cultural identification)

model precis Interpretation:

The correlation coefficient (R) of .308 suggests a vulnerable to slight high-quality correlation among CI and CAI. An R rectangular value of 0.0.5 suggests that 9.5% of the variant in CAI is defined via the model. The adjusted R rectangular fee (0.087) debts for the wide variety of predictors, imparting a sophisticated estimate. the standard blunders of the estimate (0.87131) indicates the common distance among determined and predicted CAI values.

ANOVA Interpretation:

The ANOVA results reveal that the regression model is statistically sizeable, with an F value of 12.081 and a p-value of .001. The regression sums of squares (9.172) and the residual sum of squares (87.307) indicate the proportions of explained and unexplained variance, respectively. since the p-price is less than 0.05, the version is statistically considerable, and there's a significant courting between CI and CAI.

Coefficients Interpretation:

The unstandardized coefficient (B) of zero.32 approach that for every unit boom in CI, CAI is expected to growth by using zero.32 gadgets. The standardized coefficient (Beta) of 0.308 shows a positive and sturdy relationship between CI and CAI. The consistent (intercept) of 1.579 represents the expected CAI value whilst CI is 0.

The t-cost of three.476 suggests that the coefficient is statistically large, with a p-price of .001. This high-quality and huge courting among CI and CAI shows that as cultural identification rankings growth, the perceived effect of cosmetics advertising and marketing also rises.

This regression evaluation suggests a giant relationship between cultural identification (CI) and cosmetics advertising impact (CAI). The version is statistically substantial, and the high-quality

coefficient (B) suggests that as cultural identification strengthens, the perceived effect of cosmetics advertising additionally increases. but the R rectangular price of 0.1/2 implies that other elements also affect the perceived effect of cosmetics advertising, as cultural identity by me explains handiest 9.5% of the version in CAI as shown in table 8 .

Table 8 regression analyses for CI with CAI

Variables Entered/Removed a			
Model	Variables Entered	Variables Removed	Method
1	CI b	.	Enter

a Dependent Variable: CAI
b All requested variables entered.

Model Summary				
Model	R	R Square	Adjusted R Square	Std. Error of the Estimate

ANOVA a						
Model		Sum of Squares	df	Mean Square	F	Sig.
1	Regression	9.172	1	9.172	12.081	.001b
	Residual	87.307	115	0.759		
	Total	96.479	116			

a Dependent Variable: CAI
b Predictors: (Constant), CI

Coefficients a						
Model		Unstandardized Coefficients		Standardized Coefficients		
		B	Std. Error	beta	t	Sig.
1	(Constant)	1.579	0.299		5.273	0
	CI_median	0.32	0.092	0.308	3.476	0.001

a Dependent Variable: CAI

5.0 Conclusion

This have a look at explored the connection between cosmetics advertising and its effect on intake patterns and cultural identity amongst Kurdish students in the Kurdistan-Iraqi location. using statistical analyses like reliability checks, correlation research, t-checks, and regression analyses, the studies provided treasured insights into how cosmetics marketing shapes purchasing conduct and cultural perceptions.

The reliability analyses indicated that the survey instruments demonstrated strong internal consistency, with Cronbach's Alpha values ranging from zero.764 to 0.874 across the variables examined. This guarantees that the objects continuously measured the supposed constructs, validating the data amassed and confirming the reliability of the scales used in the survey.

The correlation evaluation revealed good sized positive relationships among Cosmetics marketing effect (CAI), consumption sample (CP), and Cultural identity (CI). more potent intake styles and a better cultural identity rating have been associated with a more tremendous impact of cosmetics advertising. these relationships highlighted the interconnectedness among advertising and marketing, purchaser conduct, and identification formation, specifically in a rapidly changing cultural context.

impartial-samples t-checks confirmed that there were substantial variations among male and woman individuals of their responses to cosmetics marketing. girls pronounced a more potent impact of advertising on their consumption patterns and cultural identification as compared to men, suggesting that gender plays a essential function in how advertising and marketing impacts conduct and perceptions. This gender disparity underscores the importance of spotting how distinctive demographic elements can affect advertising effectiveness.

Regression analyses tested that both consumption styles and cultural identification drastically motivated the perceived impact of cosmetics marketing. even though the relationships had been fantastic and statistically giant, the models explained handiest a portion of the variant in CAI, implying that different elements also make contributions to how advertising is perceived. those findings underscore the complexity of customer conduct and advise that cultural identification and consumption patterns alone do not fully account for how advertising and marketing affects people.

In terms of implications, the findings screen that cosmetics advertising extensively affects intake patterns and cultural identity among Kurdish college students, mainly women. these effects have critical implications for marketers seeking to expand their reach in this demographic. The studies emphasizes the want for culturally sensitive and focused advertising techniques that resonate with the values and ideals of this target audience.

trying to destiny research, studies may want to delve into different variables that could impact the effectiveness of cosmetics marketing, together with socioeconomic repute, virtual literacy, and exposure to Western media. moreover, qualitative research could offer deeper insights into how cultural identity shapes perceptions of advertising and marketing and consumption styles.

6.0 recommendation

1. **Culturally touchy advertising strategies:**
    - entrepreneurs ought to layout advertising and marketing campaigns that admire and replicate Kurdish cultural norms and values. knowledge neighborhood cultural identification can assist create messages that resonate with the target audience.
2. **segment-particular advertising:**
    - Given the variations in advertising effect based on gender, marketers should tailor messages to specific demographic companies. developing separate campaigns that appeal specially to ladies and men may improve the overall effectiveness.
3. **Leverage local Influencers:**
    - taking part with nearby influencers who're nicely-appeared inside the Kurdish network can help amplify marketing messages and construct accept as true with with customers. four. **sell effective Cultural identification:**
    - classified ads need to emphasize fine cultural identification, integrating factors that reinforce the values, traditions, and strengths of the Kurdish community at the same time as encouraging using cosmetics in a culturally congruent way.
4. **academic Campaigns on intake:**
    - To balance international advertising influences, behavior educational campaigns that promote informed customer behavior and spotlight the significance of conscious intake.
5. **incorporate comments Loops:**
    - brands should establish channels for patron comments to continually refine their advertising techniques and better recognize local preferences and issues.
6. **Diversify Media Channels:**
    - utilize a couple of media channels to attain a broader section of the Kurdish market. at the same time as conventional media remains important, on line and social media systems can boom attain, specially among younger consumers.
