Consequences of Servant Leadership on Service Recovery Performance and Bullying

April 2024

Abstract

The aim of the current study is to investigate the effect of servant leadership on service recovery performance and bullying in workplace among employees in car service in Sulaymaniyah-City Kurdistan regen of Iraq. The type of the study is a quantitative survey based on quantitative. The sample size of the study consists of (118) worker's car service in Sulaymaniyah-city. One of the most important results of the study is that servant leadership has a positive significant effect on service recovery performance and has a negative significant effect on bullying. The study provides serval recommendations, one of the most important ones is that Servant leadership behaviors have to be modeled by way of leaders of their interactions with staff participants and customers. This involves being empathetic, actively listening, and giving staff participants decision-making authority.

Keywords: servant leadership, service recovery performance, bullying, car service, Sulaymaniyah-City Kurdistan regen/Iraq

1 Introduction

Leadership plays a crucial role in a business's response to customer concerns and resolving workplace issues. Strong leaders prioritize customer needs and provide necessary tools for service recovery. Ineffective leadership can lead to dissatisfaction and workplace bullying. Executives must lead by example and create a respectful work environment. Hiring and retaining qualified employees is essential for generating excellent results. Appreciation and a welcoming work environment lead to higher performance, including creative performance. Resonant leaders are a new leadership style that emphasizes managing emotions and empathizing with followers to achieve high performance levels. They share thoughts, feelings, and direction, and are sensitive to others' emotions. This style focuses on the social and emotional needs of the workforce, fostering harmonious collaboration and expressing ideas. However, this can lead to unfavorable workplace phenomena like harassment, bullying, and emotional abuse.

1.1 Problem statement

We have found that service recovery performance in the business of car service in Sulaymaniyah City Kurdistan area of Iraq is not as efficient as it could be, and there is a high degree of bullying in the workplace. The explanation for this might be that they are not implementing a servant leadership style.

1.2 Objectives of the study

1-Identify the level of servant leadership in car service in Sulaymaniyah city of Kurdistan region of Iraq

2-Identify the level of service recovery performance

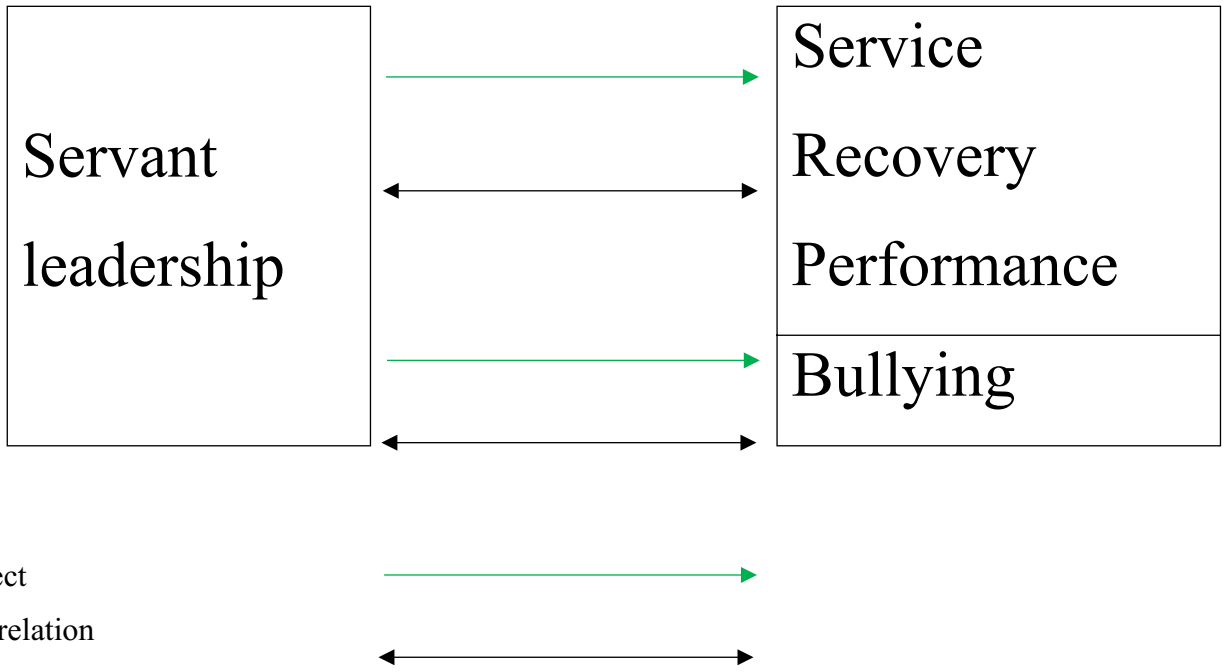
3-Identify the level of bullying

4-Determine the correlation between servant leadership and (a) service recovery performance, and (b) bullying.

5-Determine the effect of servant leadership on (a) service recovery performance, and (b) bullying

1.3 Framework of the study

Figure 1 framework of the study



1.4 Hypotheses of the study

H1 a: There is a significant positive correlation between Servant leadership and service recovery performance.

H1 b: There is a significant negative correlation between Servant leadership and bullying.

H2 a: servant leadership has a significant positive effect on service recovery performance.

H2 b: servant leadership has a significant negative effect on bullying.

Table 1 Empirical Studies for Servant Leader

Study no.	1
Name of researchers and title	(Alice Canavesi, Eliana Minelli 2021)
Title	Servant Leadership: A Systematic Literature Review and Network Analysis
Type of the study	Quantitative
Place of study	Worldwide but mostly USA
Sample size	357
Statistical package	SLNA and SLR
Aim	With the aid of bibliometric techniques, this study aims to offer a supplementary and additional review of the literature on servant leadership, evaluate the field's historical development, present the state-of-the-art regarding major trends, and open up new directions for future investigation.
Hypothesis	A positive Correlation of servant leadership prevails in the literature.
Result	The present study's analytical results suggest that the literature's interpretation of servant leadership is positive because it can lead to positive attitudes, behaviors, and performance outcomes in followers.
recommendation	Academics ought to investigate the possible disadvantages of servant leadership, evaluate its applicability in various industries, and determine the optimal context for its application.
Study no.	2
Name of researchers and title	(Shagufta Zada, Jawad Khan, Imran Saeed, Zhang Yong Jun, Alejandro Vega-Muñoz, Nicolás Contreras-Barraza, 2022)
Title	Servant Leadership Behavior at Workplace and Knowledge Hoarding: A Moderation Mediation Examination
Type of the study	Quantitative
Place of study	Pakistan
Sample size	382
Statistical package	SPSS V. 20

Aim	The theoretical and practical ramifications of this study are highlighted, adding to the corpus of knowledge. Fostering an environment that is psychologically safe for mastery, supports organizations where the presence of servant leadership may discourage knowledge hoarding.
Hypothesis	The servant leadership of workers was shown to be positively correlated with psychological safety and negatively related to knowledge hoarding
Result	Effective knowledge management is impossible without effective leadership.
recommendation	The results contribute to both theory and practice, paving the way for further exploration in the field of knowledge management.
Study no.	3
Name of researchers and title	(Radi, Sherihan, 2022)
Title	The Impact of Servant Leadership on Employees' Motivation with the Mediating Role of Employees' Job Satisfaction: The Case of the Petroleum Sector in Egypt
Type of the study	Quantitative
Place of study	Egypt
Sample size	186
Statistical package	SPSS17.0, AMOS18.0
Aim	The goal of this study was to investigate how servant leadership affects workers' motivation while controlling for work satisfaction.
Hypothesis	Servant leadership has a positive impact on employees' motivation and job satisfaction.
Result	According to the findings of this empirical study, employees' motivation at work is significantly increased by servant leadership, and 77% of the relationship between servant leadership and employees' motivation is mediated by their job satisfaction.
recommendation	This study makes the case that organizations should pay more attention to implementing a servant leadership style across all of their departments to guarantee the existence of an empowered, motivated, and productive workforce.
Study no.	4
Name of researchers and title	Marisi Pakpahan, Hardianawati, Suwarlan (2020)

Title	Servant Leadership and Performance Employee: The Mediating Effect of Organizational Commitment
Type of the study	Quantitative
Place of study	Indonesia
Sample size	123
Statistical package	SEM- Lisrel 8.8
Aim	The leadership process is one of the most important factors in motivating employees to perform well. This study examines how servant leadership variables impact employee performance, using organizational commitment as a mediator.
Hypothesis	Although there is no significant relationship between servant leadership and organizational commitment, there were positive outcomes that had a significant impact on employee performance. Organizational commitment has a positive and significant effect on employee performance, and when servant leadership is combined with organizational commitment, the results are also positive and significant.
Result	This study does not support the concept of super vetion and buling
recommendation	thics are integral to the credibility and transparency of financial reporting. Balancing adherence to accounting theories while maintaining ethical integrity is of utmo

Study no.	5
Name of researchers and title	(Derry Wanta, Yvonne Augustine 2021)
Title	The Effect of Servant Leadership, Job Satisfaction, and Organizational Culture on Employee Performance Moderated by Good Governance in Women's Cooperative Institution
Type of the study	Quantitative
Place of study	Indonesia
Sample size	248
Statistical package	SEM-PLS
Aim	This study aims to investigate the effects of organizational culture, employee satisfaction, servant leadership, governance, and women's cooperative employees' performance.
Hypothesis	Servant Leadership has a negative effect on the performance of Women's cooperative employees There is a stronger correlation between organizational culture and performance in cooperatives with better governance.
Result	The study's key finding is that gender matters a lot when it comes to managing cooperative institutions.
recommendation	Future studies can look at variables like work discipline, personality, and financial performance that come after employee performance.

Table 2 Service recovery performance

Study no.	1
Name of researchers and title	*(Munawar Javed Ahmad, Dr. Norzieirani bt Ahmad, Nazlina Zakaria*, 2018)
Title	Service Recovery Performance: A Critical Review of Literature
Type of the study	Qualitative
Place of study	Pakistan
Sample size	N/A
Statistical package	N/A
Aim	By offering efficient service recovery, service providers can cultivate strong, enduring relationships with their clients and win their commitment, loyalty, and acceptance of their products.

Hypothesis	N/A
Result	By offering efficient service recovery, service providers can foster strong, long-lasting relationships with their clients and win their commitment, loyalty, and acceptance of their products. Customer satisfaction is the foundation of customers' solid relationships with businesses and brands.
recommendation	Further research is necessary due to the scarcity of existing knowledge on the subject, and in addition, many studies share similar philosophical and methodological presumptions, which encourage basic comparative discovery.
Study no.	2
Name of researchers and title	*(Ding Ma, Nauman Wajid, Muhammad Khalid Anser, Zafar-Uz-Zaman Anjum, Xiaoyun Jia, 2022)*
Title	The effect of ethical leadership on service recovery performance: A moderated mediation model of organizational virtuousness and trait mindfulness
Type of the study	Quantitative
Place of study	China
Sample size	273
Statistical package	SPSS
Aim	The current study tested the mediating role of organizational virtuousness in the relationship between ethical leadership and SRP in service contexts after first examining the relationship between ethical leadership and frontline employees' (FLEs) service recovery performance (SRP).
Hypothesis	The effect is directly altered by the relationship of factors with SRP.
Result	The results demonstrate the critical role that moral leadership plays in motivating staff to address customer complaints in a way that could have significant positive effects on service organizations. Therefore, it is encouraged for service organizations to help managers develop and practice ethical leadership behaviors. In this case, the options are numerous. For instance, this can be depended upon by offering leadership development programs along with the display of moral leadership traits like honesty, compassion, and integrity. Through these programs, leaders can become more cognizant of the value of moral leadership in influencing employee conduct and enhancing FLEs' SRP.
recommendation	Therefore, to provide a more thorough understanding of this relationship between leadership and SRP, future research should also look into the relationship between other positive leadership styles and SRP.
Study no.	3

Name of researchers and title	*(Shishi Kumar Piaralal, Muhammad Awais Bhatti, Niriender Kumar Piaralal, Ariff Juhari 2016)*
Title	Factors affecting service recovery performance and customer service employees: A study of Malaysian life insurance industry
Type of the study	Quantitative
Place of study	Malaysia
Sample size	350
Statistical package	SPSS
Aim	This paper's goal is to look into three different aspects of the variables affecting customer service representatives' service recovery performance (SRP) in the life insurance sector:
Hypothesis	Hypothesis testing Simple and multiple regressions were used to test the direct relationship between independent and dependent factors in all the above-mentioned hypotheses.
Result	Customer service orientation was found to be positively correlated with SRP. An employee culture focused on customer service was crucial because the life insurance industry considers long-term relationships with customers to be fundamental to business strategies.
recommendation	Future research may concentrate on and include elements like service technology, burnout, service leadership, interpersonal and work conflict, as well as potential SRP outcomes like customer satisfaction, profit, service quality, customer loyalty, and recovery value—all of which may be crucial for service recovery.
Study no.	4
Name of researchers and title	*(Janis L. Miller, Christopher W. Craighead , Kirk R. Karwan 2000)*
Title	Service recovery: a framework and empirical investigation
Type of the study	Quantitative
Place of study	Southeastern United States
Sample size	448
Statistical package	Not mentioned (expected program SPSS)
Aim	This paper provides a framework for managers to understand the service recovery situation from an operations perspective. It also provides a starting point for researchers in operations management to identify issues.
Hypothesis	Diverse and different outcomes were available

Result	The results emphasize the importance of operational activities in service recovery. The paper then emphasizes the importance of conducting operations-based research to gain a better understanding of the recovery process and develop more empirically based descriptive and prescriptive models.
recommendation	It's important to note that this study was conducted with university students. While these respondents represent important customer segments, caution should be exercised when interpreting certain results.
Study no.	5
Name of researchers and title	*(Ah-Keng Kau and Elizabeth Wan-Yiun Loh 2006)*
Title	The effects of service recovery on consumer satisfaction: a comparison between complainants and non-complainants
Type of the study	Quantitative
Place of study	Singapore
Sample size	428
Statistical package	SPSS
Aim	The primary goal of this research is to investigate the impact of service recovery on customer satisfaction. It focuses on the perception of "justice" in service recovery and how it influences satisfaction and behavioral outcomes. The study also investigates whether the "recovery paradox" exists.
Hypothesis	This study found a significant and positive relationship between distributive justice and satisfaction with service recovery.
Result	Effective management and trained staff handling complaints are vital for ensuring satisfaction. Satisfaction with service recovery boosts trust in providers and encourages positive word-of-mouth, crucial for attracting and retaining customers.
recommendation	Future research should attempt to broaden the sample and thus achieve a better representation of the general population of mobile phone users.

Table 3 Empirical studies for bullying

Study no.	1
Name of researchers and title	*(Dalia, Kosar, Rawezh 2022)*
Title	Impact of resonant leadership in reducing workplace bullying: A case from Sulaymaniyah Chamber of Commerce & industry
Type of the study	Quantitative
Place of study	Koya, Kurdistan Region, Iraq
Sample size	Respondent (n=45)
Statistical package	SPSS V.24
Aim	the research aims to investigate and understand how resonant leadership influences or contributes to the reduction of workplace bullying. The study may involve analyzing the strategies or practices employed by leaders in Sulaymaniyah to create a positive and supportive work environment that minimizes instances of bullying.
Hypothesis	there is a negative and significant relationship between compassion and workplace bullying with a correlation of (-0.781)
Result	As a result, we can share awareness with people who may receive and read this research about how a leader can change their way of leading within their service to provide the best environment for employees such as an anti-bullying workplace.
recommendation	Servant leadership affects service recovery outcomes and whether it can help lessen bullying at work.
Study no.	2
Name of researchers and title	(Ashraf Tag-Eldeen, Mona Barakat, Hesham Dar 2017)
Title	"Investigating the impact of workplace bullying on employees' morale, performance and turnover intentions in five-star Egyptian hotel operations"
Type of the study	Quantitative
Place of study	Egypt
Sample size	Respondent (n=55)
Statistical package	SPSS V.20

Aim	Determining the effect of workplace bullying on employees' performance, morale, and intention to leave was the primary goal of the research.
Hypothesis	Workplace bullying has a significant negative impact on every factor that is mentioned in the research with a Correlation of 0.147
Result	As a result, regarding the stat we can determine bullying not in the first place but in the second to prevent any more negative impacts that act on employee's performance.
recommendation	To examine the effects on other hotel categories, such as three- or four-star hotels, in additional geographic locations and even in other hospitality-related industries, more research can be done to increase the sample size.
Study no.	3
Name of researchers and title	*Samuel Farley, Daniella Mokhtar, Kara Ng & Karen Niven (2023)*
Title	What influences the relationship between workplace bullying and employee well-being? A systematic review of moderators
Type of the study	Quantitative
Place of study	Worldwide mostly Norway
Sample size	209
Statistical package	PsycINFO,
Aim	Using the job demands-resources model, the objective of this systematic review is to identify, classify, and assess variables that have been tested as moderators of the relationship between workplace bullying and well-being.
Hypothesis	Diversity of the studies and questionaries cant determine specifically
Result	Analysis revealed that social resources, such as co-worker support, and organizational resources, such as supportive organizational climates, consistently buffered the harmful effects of bullying.
recommendation	To ascertain whether the influence of these moderators endures over time and in various cultural contexts, more cross-cultural and longitudinal research is required.
Study no.	4

Title	Prevalence of Workplace Bullying and Its Associated Factors among Workers in a Malaysian Public University Hospital: A Cross-Sectional Study
Type of the study	Quantitative
Place of study	Malaysia

Sample size	178
Statistical package	SPSS 22.0
Aim	The purpose of this study was to determine the prevalence of workplace bullying and its associated factors among healthcare workers at a Malaysian public university hospital.
Hypothesis	Outcome research could be conducted extensively, eg. identifying correlations between bullying and sickness absence among healthcare health-service delivery meeting client demand and needs
Result	This study offers evidence for hospital directors and managers to take preventive measures against workplace bullying. Preventive measures could be implemented at the hospital, departmental, or unit level to identify vulnerable groups who are most likely to be bullied.
recommendation	Future research should include larger sample sizes and multicenter studies involving both public and private hospitals in Malaysia to better understand workplace bullying in this challenging industry, which is critical to the country's healthcare workforce.
Study no.	5
Name of researchers and title	*(Mohammed Mohammed 2021)*
Title	*The Relationship Between Bullying in the Workplace and Organizational Commitment: A Research in Iraq*
Type of the study	Quantitative
Place of study	Iraq
Sample size	137
Statistical package	SPSS 23.0
Aim	The main aim of the research is to investigate the relationship of bullying in the workplace on job satisfaction, and organizational commitment.
Hypothesis	A statistically significant weak positive correlation was found between bullying in the workplace and affective commitment
Result	The correlational analysis found a weak negative relationship between workplace bullying and affective commitment.
recommendation	No recommendation for further studies.

Source: Researchers based on literature

If we arrange the studies, we used for our research it can be sorted like the following: firstly the empirical study table number one of servant leadership (*Alice Canavesi, Eliana Minelli*

2021) second table *(Shagufta Zada, Jawad Khan, Imran Saeed, Zhang Yong Jun, Alejandro Vega-Muñoz, Nicolás Contreras-Barraza, 2022)* third table (Radi, Sherihan, 2022) fourth table (Marisi Pakpahan, Hardianawati, Suwarlan 2020) lastly in this empirical study table no. 5 (Derry Wanta, Yvonne Augustine 2021) then followed by an empirical study of Service Recovery Performance which also took five sources starting with *(Munawar Javed Ahmad, Dr. Norzieirani bt Ahmad, Nazlina Zakaria*, *2018)* secondly *(Ding Ma, Nauman Wajid, Muhammad Khalid Anser, Zafar-Uz-Zaman Anjum, Xiaoyun Jia, 2022) table no. three with (Shishi Kumar Piaralal, Muhammad Awais Bhatti, Niriender Kumar Piaralal, Ariff Juhari 2016) table no. four (Janis L. Miller, Christopher W. Craighead, Kirk R. Karwan 2000) and lastly (Ah-Keng Kau and Elizabeth Wan-Yiun Loh 2006)* taking the next step with the empirical study of bullying also five studies were brought to establish the statement, firstly *(Dalia, Kosar, Rawezh 2022)* east (Undeveloped countries) which the sample size took a crucial role in the service sector with different genres, taking consideration and notes of the sources for this paper SPSS have been chosen to determine the hypothesis and evaluation.

This paper distinguishes itself through its comprehensive exploration and analysis of the three primary topics, amalgamating them into a cohesive research framework. It doesn't just focus on each topic separately but explores how they are connected. The paper also carefully examines how the survey was done and explains how it will influence the overall paper. By doing this, the paper contributes to our knowledge of each topic and provides a complete view of how they relate to each other. By weaving together these elements, the paper not only contributes to the scholarly discourse on each topic individually but also presents a holistic perspective that enriches the collective understanding of their interplay, rendering it a valuable and unique scholarly endeavor

2 Literature Review

2.1 servant leadership

expertise and practice of management that places the best of these led over the self-hobby of the chief, emphasizing chief behaviors that target follower development, and de-emphasizing glorification of the chief, and Servant leaders consciousness specifically on their fans' pastimes before their hobbies. in addition they middle on the improvement of their followers to their fullest capacity (Christopher W. Craighead, Kirk R. Karwan 2015).

Servant management is a philosophy and set of practices that enrich the lives of people, build better corporations, and in the end create a extra simply and being concerned global. This leadership approach emphasizes the leader's function as a servant first, in search of to serve others' desires while focusing on the well-being of their crew individuals and the communities to which they belong. This essay delves into the origins of servant management, its key standards, the effect of servant management on businesses and people, challenges in implementing this leadership fashion, and the important role (Kal Cl. 2021)

2.1.1 Origins of Servant management

The idea of servant leadership became coined with the aid of Robert okay. Greenleaf in his 2005essay "The Servant as leader." Greenleaf's idea became modern on the time, providing a shift far from conventional management models that emphasized power and manage, toward a version in which leaders prioritize the wishes of their followers. Greenleaf believed that real management emerges from folks who are evidently inclined to serve first, with the conscious desire to steer coming to higher serve others.

2.1.2 Key concepts of Servant management

Servant leadership is grounded in numerous key ideas that distinguish it from other management patterns from (G. Zslie. 2014)

Listening: Servant leaders pay attention actively to their group's thoughts and worries, valuing their contributions and fostering a way of life of open verbal exchange.

Empathy: They try to understand and empathize with others, spotting the precise value of each man or woman inside the enterprise.

restoration: Servant leaders are aware of the private well-being in their crew participants, promoting a holistic approach to painting-life stability.

focus: This involves being aware of oneself and the impact one has on others, fostering a deep sense of ethics and duty.

Persuasion: in preference to relying on authoritarian strength, servant leaders use persuasion to construct consensus and inspire collaboration.

Conceptualization: they've the ability to ascertain the destiny and formulate strategies that align with the company's long-time period goals.

Foresight: Servant leaders assume the destiny results of their selections, ensuring that they act within the excellent interest of their team and business enterprise.

2.1.3 impact on companies and individuals

The implementation of servant leadership has profound implications for each organization and people. For agencies, this leadership style can cause improved worker engagement, better process pride, and stepped forward performance. whilst leaders prioritize the wishes in their personnel, it creates superb paintings surroundings that encourages loyalty and decreases turnover quotes. running under a servant chief can result in personal and expert increase, accelerated motivation, and a extra feel of achievement (Marl, S. W. 2016).

2.1.4 demanding situations in implementing Servant leadership.

While the advantages of servant leadership are giant, implementing this management style isn't always without demanding situations. It calls for leaders to go through a fundamental shift in mindset from seeking electricity to prioritizing carrier. this will be hard in aggressive enterprise environments in which traditional leadership models are nevertheless regularly occurring. moreover, servant management demands a excessive degree of emotional intelligence, self-attention, and commitment to personal boom, which may be tough for a few leaders to increase(Haini, ok. A. 2018).

2.1.5 The function of Servant Leaders

In cutting-edge rapidly changing and interconnected international, the want for servant leadership is more important than ever. Servant leaders can drive tremendous alternate via addressing complicated social and environmental issues, selling ethical commercial enterprise practices, and fostering inclusive communities.(Timer. L. 2020) by using prioritizing the nicely-being of others and serving a reason greater than themselves, servant leaders have the ability to create a ripple impact, inspiring others to adopt a service-orientated technique in their own lives and work. Servant leadership represents a transformative

technique to management that can cause greater moral, sustainable, and powerful corporations. by way of focusing on serving others, servant leaders now not simplest beautify the well-being and improvement of their team participants but also contribute to the advent of a greater compassionate and equitable society. even though challenges exist in adopting this management style, the potential advantages for people, corporations, and society at massive make it a compelling model for destiny leaders. As the sector keeps to stand complex demanding situations, the ideas of servant leadership provide a route towards more humane and effective leadership practices(Freman, T. L. 2018).

2.1.6 Comparative evaluation with other management styles

Servant leadership stands in stark contrast to greater conventional management paradigms, inclusive of transformational and transactional management, by prioritizing the increase and nicely-being of crew members and the groups to which they belong. Gandolfi, Stone, and Deno (2017), and Hoch et al. (2018) articulate the efficacy of servant leadership in fostering an environment in which worker satisfaction and organizational commitment are markedly better. This leadership method is characterised via its focus on empathy, listening, and the empowerment of fans, distinguishing itself with the aid of promoting a way of life of mutual appreciate and collaboration. with the aid of comparing servant leadership with different models, it turns into obvious that this approach not most effective complements organizational overall performance but also cultivates a extra gratifying and moral administrative center environment.

2.1.7 Case research of Servant leadership in action

The sensible application of servant leadership ideas can lead to transformative consequences for companies. by inspecting the narratives offered via Gandolfi, Stone, and Deno (2017), and strengthened by way of Jit, Sharma, and Kawatra (2016), we advantage insight into how the adoption of servant leadership fosters a way of life of mutual admire, open communication, and collective responsibility. those case research demonstrate that after leaders prioritize the needs in their teams and adopt a servant-first attitude, they are able to triumph over big demanding situations, leading to more advantageous crew performance, improved activity delight, and a more potent organizational identity. those actual-international examples serve as compelling proof of the high-quality impact that servant management will have on both the micro and macro scales of organizational life.

2.2 Service recovery performance.

Carrier recuperation overall performance refers back to the moves and techniques employed by businesses to rectify a service failure and repair client pride. This idea is crucial in ultra-modern aggressive marketplace surroundings, in which the exceptional of customer support can drastically impact patron loyalty and notion of a logo. An powerful carrier restoration manner can remodel disenchanted customers into unswerving ones, whereas ineffective recovery can result in lost customers and terrible word-of-mouth publicity. This essay explores the significance of carrier recuperation overall performance, its key components, techniques for powerful provider recovery, demanding situations companies face in implementing these strategies, and the effect of era on carrier recovery(Jaly Gl. 2015).

2.2.1 Significance of provider recovery overall performance

The inevitability the unavoidable nature of carrier failures, stemming from a large number of sources which includes human mistakes, technological system faults, or unexpected outside circumstances, underscores the essential importance of carrier recovery inside the domain of customer support management. Intriguingly, the way a corporation addresses a provider mishap regularly holds extra sway over patron pleasure and allegiance than the initial mishap itself. This dynamic underscore a profound fact in the customer service sphere: the decision of the issue can extensively alter the consumer's notion and courting with the emblem.

effective carrier restoration isn't always merely a method to rectify a wrong; it serves as an possibility to transform a probably bad revel in right into a high-quality one, engendering outcomes which are relatively favorable from a commercial enterprise attitude. these results include heightened ranges of customer satisfaction, bolstered loyalty, an boom in fantastic phrase-of-mouth suggestions, and, in some times, the status quo of a deeper consider within the employer than existed previous to the incident. this sort of counterintuitive final results is encapsulated in the idea of the service healing paradox, a phenomenon that illustrates the unique possibility businesses have to significantly bolster patron relationships via adept provider healing techniques (Robin, C. L., 2012).

The carrier recuperation paradox not best reflects the resilience and adaptability of effective customer support practices however also serves as a testament to the value clients region on being heard, understood, and valued, particularly in the aftermath of service disasters. with the aid of enforcing comprehensive provider healing measures which might be responsive,

empathetic, and proactive, corporations can turn provider failures into effective touchpoints for deepening consumer engagement and loyalty. This method requires a nuanced knowledge of consumer expectancies and a dedication to exceeding those expectancies via service healing efforts.

In essence, the inevitable incidence of provider screw ups in any patron-orientated enterprise necessitates a strategic attention on carrier recuperation as a important element of usual customer service management. The ideas underlying effective provider restoration techniques—responsiveness, empathy, and exceeding client expectations—provide a blueprint for remodeling service screw ups into opportunities for strengthening customer accept as true with and loyalty. This strategic method to provider restoration not most effective mitigates the negative impacts of carrier disasters however also leverages these incidents as pivotal moments for enhancing customer relationships and, with the aid of extension, the business enterprise's long-term achievement. The service recovery paradox highlights the potential of awesome provider recovery to beautify patron relationships(Robin, C. L. 2012).

2.2.2 Key components of carrier recuperation

carrier recuperation performance hinges on several key components made by means of (Qulik, T. L 2020):

- Timeliness: the velocity with which a business responds to a carrier failure is regularly as important because of the reaction itself. set off provider healing can mitigate frustration and inconvenience experienced via the client.
- Empathy: know-how and acknowledging the patron's emotions and inconvenience caused by the provider failure is crucial for effective carrier recovery.
- fairness: customers anticipate a honest resolution to their lawsuits, which means the reimbursement or treatment should in shape the extent of inconvenience or dissatisfaction skilled.
- resolution: powerful trouble-solving skills are crucial to address the problem properly and prevent its recurrence.

2.2.3 challenges in provider healing

companies may face several challenges in executing powerful service recuperation techniques:

Consistency: making sure regular service healing throughout all client touchpoints and interactions may be challenging, mainly for larger businesses. perception of fairness: what is considered honest reimbursement can range significantly amongst clients, making it hard to meet every person. employee Resistance: a few employees may additionally face up to taking the initiative in provider restoration because of fear of repercussions or lack of motivation(Riva, L. ok. 2018).

Technology performs a pivotal position in improving carrier restoration overall performance. automated structures can help in fast figuring out provider screw ups, permitting faster response instances. Social media platforms and on line assessment websites have made it less difficult for customers to voice their court cases, but they also offer organizations with the opportunity to publicly reveal their commitment to client delight via effective carrier restoration actions. moreover, statistics analytics can offer insights into not unusual carrier screw ups and customer expectancies, guiding greater strategic and powerful healing efforts. provider restoration overall performance is a crucial issue of customer support management. An effective carrier recuperation process not best addresses the instant problem at hand however additionally contributes to constructing a more potent, extra trusting dating with the patron(Dali W. W. 2005) by way of know-how the importance of timely, empathetic, fair, and powerful decision strategies, companies can flip provider disasters into opportunities for boosting purchaser pride and loyalty. no matter the demanding situations involved, the ability rewards make striving for excellence in carrier recovery a worthwhile undertaking for any commercial enterprise. furthermore, leveraging technology can useful resource in achieving extra green and powerful carrier recovery, in the end main to a competitive benefit within the market(Juner W. W. 2021).

The method of recuperating and keeping the high-quality of the provider to meet customer satisfaction and expectancies to create enduring relationships between the company and the purchaser is protected in the aspect of provider recuperation overall performance. This guarantees that the expectancies of the employees and the purchaser (J. L. Tasnl 2021).

2.2.4 fine Practices in carrier recovery

powerful provider recovery is paramount in maintaining customer loyalty and pleasure within the aftermath of provider screw ups. Drawing at the work of Heidenreich et al. (2015), this section highlights the significance of adopting a proactive, empathetic method to provider recovery. the combination of transparency, pace, and personalized responses within the healing technique is important for rebuilding accept as true with and satisfaction among affected customers. via systematically enforcing those exceptional practices, organizations can transform negative service reviews into opportunities for demonstrating their commitment to client pleasure and service excellence.

2.2.5 patron feedback and non-stop development

The pivotal role of consumer comments in the iterative process of carrier improvement is thoroughly explored in the context of carrier healing performance. As highlighted with the aid of Heidenreich et al. (2015), leveraging purchaser remarks now not simplest aids in figuring out carrier disasters but also gives useful insights into the effectiveness of recovery efforts. This non-stop loop of feedback and development is important for refining provider techniques, improving consumer reviews, and fostering a tradition of responsiveness and flexibility within groups.

2.2.6 mental factors of service restoration

The psychological foundations of service restoration play a pivotal function in comprehensively grasping and adeptly addressing the emotional ramifications of carrier disasters on clients. Heidenreich et al. (2015) accentuate the critical importance of emotional intelligence, empathy, and adept conversation as essential additives in orchestrating successful carrier healing endeavors. This trio of psychological skills equips provider personnel with the important tools to forge deeper connections with customers, fostering an surroundings wherein customer concerns aren't most effective mentioned however deeply understood.

moreover, the cultivation of these competencies enables the delivery of resolutions that transcend mere effectiveness, aiming alternatively to attain emotional resonance and pleasure among clients. Emotional intelligence, especially, permits provider team of workers to navigate the complicated panorama of human feelings, permitting them to respond to bad remarks with grace and constructiveness (C. A., Hinojosa 2016). This capability is

instrumental in diffusing potentially risky situations and reworking them into opportunities for constructing accept as true with and loyalty.

Empathy, as highlighted by using Heidenreich et al. (2015), serves as the bedrock of knowledge customer frustrations, permitting carrier carriers to view the state of affairs from the consumer's angle and thereby tailor their responses to without delay address the purchaser's emotional state and wishes. Skillful communique, intertwined with empathy and emotional intelligence, guarantees that those empathetic insights are effectively conveyed, demonstrating to clients that their feelings and views are valued and brought critically.

the combination of emotional intelligence, empathy, and communique abilities in service recuperation techniques not handiest aids within the instantaneous resolution of service failures but additionally contributes to the lengthy-term courting among the business enterprise and its customers. by means of prioritizing those mental capabilities, groups can make certain that their service recuperation efforts are not merely transactional however are meaningful interactions that enhance customer pleasure and loyalty. This approach to provider recuperation, rooted in a deep information of the mental components of purchaser interactions, underscores the shift toward greater purchaser-centric enterprise fashions that apprehend the price of emotional connections in driving enterprise achievement (M., & Falk, T., 2015).

2.3 Bullying

is the intentional use of words or behaviors towards someone or institution frequently to purpose them bodily, mental, or social harm Janis L. Miller 2020. within the place of business, especially whilst it emanates from supervisors or employers towards people inside the exertions force, represents a good sized and pervasive issue with profound implications for both people and agencies. This shape of bullying can show up in diverse methods, which includes verbal abuse, unfair criticism, deliberate exclusion, and the setting of impossible deadlines, amongst others. Such behaviors no longer handiest undermine the dignity and properly-being of personnel but additionally adversely affect the general morale, productiveness, and lifestyle of an enterprise. This essay explores the nature and impact of manager or employer bullying in the exertions force, the reasons in the back of such behaviors, strategies for addressing and stopping place of business bullying, and the role of organizational regulations and legal frameworks in fighting this trouble(J. G. Taline, 2022).

2.3.1 Nature and effect of place of work Bullying

place of work bullying via supervisors or employers involves repeated, persi stent behavior that demeans, humiliates, or intimidates people. It creates a electricity imbalance where the sufferer feels powerless to protect themselves due to the hierarchical nature of the place of business. The impact of such bullying is profound, affecting now not only the intellectual and physical health of employees, such as pressure, anxiety, melancholy, and diminished, but additionally main to reduced activity pride, higher turnover quotes, and reduced productiveness. Furthermore, it fosters poisonous work surroundings that may have an effect on even folks who are not without delay bullied, as it creates a way of life of fear and compliance in preference to collaboration and innovation.

(A. Hitler 2015).

2.3.2 motives behind Bullying behavior

Bullying behavior from supervisors or employers regularly stems from a preference to manipulate or dominate, driven through their own insecurities, energy dynamics, or organizational cultures that tacitly advise such behaviors. In some instances, it may also end result from insufficient management abilities, wherein supervisors motel to bullying as a faulty attempt to motivate employees or assert authority. additionally, competitive paintings environments and excessive-pressure needs can exacerbate dispositions closer to bullying, as

a few supervisors may also believe that creating a weather of worry can decorate performance or discipline(Markus. Ol Et 2019).

2.3.3 strategies for Addressing and stopping place of work Bullying

Addressing and preventing workplace bullying requires a multi-faceted method that includes each organizational and man or woman strategies. groups should foster a lifestyle of admiration and dignity, in which bullying behaviors are unequivocally condemned and no longer tolerated. this can be accomplished thru clear guidelines and tactics: organizing complete anti-bullying rules that outline unacceptable behaviors and outline approaches for reporting and addressing lawsuits.(Matl, F. O. 2017) education and recognition programs: implementing training packages for supervisors and employees to recognize, prevent, and deal with bullying behaviors, emphasizing verbal exchange, empathy, and conflict resolution skills. Aid systems: presenting aid mechanisms for sufferers of bullying, together with counseling services, mediation, and exclusive complaint techniques(Bing 2021). people, on their element, can report Incidents: retaining unique data of bullying incidents, including dates, times, witnesses, and the character of the bullying, to guide any claims made(Ginh, W. L. 2011). are seeking support making use of available assist mechanisms inside the organization or looking for external advice from legal or mental professionals. Assertive conversation wherein safe to achieve this, directly addressing the bullying conduct with the manager or organization, either in my opinion or through collective movement with colleagues (Varin, ok. 2019) .

2.3.4 position of Organizational guidelines and prison Frameworks

powerful organizational rules are vital in setting the tone for a deferential administrative center surroundings. Those policies need to not handiest outline bullying behavior but also establish clean effects for perpetrators, regardless of their role. Furthermore, legal frameworks play a critical role in supplying protection and recourse for victims of place of business bullying. Many nations have legal guidelines or regulations that deal with place of work harassment or bullying, providing legal avenues for court cases and redress. However, the effectiveness of those frameworks often relies upon at the willingness of individuals to come back ahead and the ability of agencies and prison systems to put into effect those laws fairly and right away (Solsz l. a. E 2018).

Bullying by way of supervisors or employers inside the exertions force is a serious problem that requires immediate and concerted efforts to address. The effects of such conduct extend far past man or woman victims, affecting the general health and achievement of corporations. By means of fostering a tradition of admiration, implementing effective rules, and training, and providing aid for the ones affected, companies can mitigate the effect of place of business bullying. Furthermore, robust prison frameworks and enforcement mechanisms are vital to defend employees and keep perpetrators accountable. in the long run, developing a bully-unfastened workplace advantages anyone, leading to more healthy, more efficient, and more harmonious paintings environments.

2.3.5 Bullying and Organizational way of life

The tricky dating among organizational way of life and the superiority of place of work bullying is tested through the lens of studies by Gullander et al. (2014) and Hansen et al. (2014). these studies elucidate how the norms, values, and behaviors recommended by way of an organization can notably influence the incidence of bullying. A tradition that values transparency, inclusivity, and recognize is proven to be powerful in mitigating bullying behaviors, highlighting the essential function of leadership in modeling and reinforcing those values throughout the organisation.

2.3.6 Effect of Bullying on worker well-being and productiveness

The destructive consequences of place of work bullying on man or woman and organizational health are profound. Gullander et al. (2014) and Hansen et al. (2014) provide empirical evidence linking bullying to a bunch of bad consequences, which include multiplied strain, intellectual fitness issues, and dwindled process overall performance. those findings underscore the significance of addressing bullying now not only as a moral imperative however also as a strategic organizational concern. effective interventions can drastically improve the well-being of personnel, foster a effective work environment, and decorate ordinary productivity.

3 Methodology

after we have reviewed all the letterer and now, we can conduct our study and the method that we have chosen is data collection via a survey form using had cope pate for data collection among the service providers, next using data analysis for social science programs like SPSS to analyze the data, since our study is quantitative among our 3 variables and we translated the questions for the audience in order to make then understand it better since they may not have the proper education to know English

Variable	**Number Of Questions**
Servant Leadership (SL)	**7**
Service Recovery Performance (SR)	**5**
Bullying (BU)	**21**

4 Results

4.1 Findings and Analysis

The objectives of this chapter is to analyze the study's field framework and ensure the reliability and validity of the questionnaire standards. This chapter describes the study sample answers results by describing the personal characteristics of the study sample participants, diagnosing the study variables (including displaying frequencies, percentages, mean, and standard deviations), in addition to examining the study hypotheses in accordance with the study methodology with the aim of confirming the validity of the study's hypothetical model. The sections covered in this chapter are as follows:

4.2 Data Preparation and Data Screening.

The process of converting the gathered data into a format suitable for data analysis is known as data preparation or screening (Zikmund et al., 2013). To conduct a relevant analysis, screening guarantees that the data is valid, accurate, and dependable (Babin & Zikmund, 2015). For the results and analytics applications to be valid, one of the main goals of data preparation is to make sure that the primary data being prepared for processing and analysis is correct and consistent. The survey responses were cleaned, coded, and entered an Excel matrix to prepare them for statistical analysis.

Identifying Missing Data and Outliers.

In most research settings, missing data is a typical occurrence that can cause issues with data processing. As a result, the impact of missing data is frequently not fully explained or appreciated in many statistical analyses. To identify missing data, the repetition method available in the SPSS v24 program was adopted to indicate whether or not some data numbers were lost.

Besides, Outliers might appear because of excessive self-reported value data as well as errors in data input, questionnaire design and instructions, observation, or general questionnaire issues. The results showed that there are no outliers data, and therefore this clarify the way for reassurance of the credibility of the results of the analysis that will be extracted through statistical programs (SPSS.V.24).

4.2.1 Reliability Test

In this study, reliability were attained by using precise measurements and distinct construct conceptualizations. Reliability refers to a measure's consistency and stability as well as the research's precision and correctness (Streiner, 2003). Table (4) shows that the highest value of the reliability coefficient using the alpha-Cronbach method at the level of variables was recorded for the Service Recovery Performance (SR) variable with a value of (.850), and then the Bullying (BU) variable with a reliability coefficient of (.839), while Servant Leadership (SL) variable came with a reliability coefficient of (.703), and for the whole questions of the questionnaire (.727). The required reliability is available for the current study's questionnaire and through its variables which is sufficient to adopt the current questionnaire's statements as a tool for field data collection.

Table 4 Reliability measurement through alpha-Cronbach method

Variable	**Number Of Questions**	**Coefficient Value**
Servant Leadership (SL)	**7**	**.703**
Service Recovery Performance (SR)	**5**	**.850**
Bullying (BU)	**21**	**.839**

4.2.2 Constructive Validity Data Fit Model Test:

The results of the data fit of the study variables data for the factorial analysis shown in the table (5). The results indicate that the value of the data fit index reached (.534), which is a value greater than the standard value of this test which is (0.50), and with reinforcement from the values of the (Bartlett) test. Where the calculated (chi-square) value of (3034.882) was greater than its tabular value of (113.145) at the degree freedom of (528), and the significant value of this test was (0.000), which is less than the default significant value of the study amounting to (0.05), which confirms the appropriateness of the study variables data for the factorial analysis of the current research.

Table 5 KMO and Bartlett's Test

Kaiser-Meyer-Olkin Measure of Sampling Adequacy.		.534
Bartlett's Test of Sphericity	Approx. Chi-Square	3034.882
	df	528
	Sig.	.000

4.2.3 Description of the demographic information of the study sample:

The results listed in table (6) provide a summary of the demographic data for the sample used in this study, which can be viewed as described in the following sentences:

Gender: According to the results of the distributed questionnaire, male respondents made up the maximum percentage (92.4%) (N= 109), while female respondents made up the lowest proportion (7.6%) (N= 9), as indicated in Table (6).

Age: the outcomes shown in table () presented that the largest percentage of the study sample according to age was in the age group (26 – 30 years) with a rate of (35.6%), (N=94). while the lowest percentage was in the age group (Less than 18 years) with a rate of (3.4%), (N=4).

Level of Education: based on the findings in Table (), the majority of the study sample's participants (44.9%), (N=53) held a Primary School degree. Two year college degree holders took the position with the lowest percentage, at (5.9%), (N=7).

Marital status: it is evident from the analysis's findings that the half of the study sample fell into the category (single), which comprised (50.0%), (N=59) of the total study sample. However, the category (divorced) came in last with a rate of (4.2%), (N=5).

Organizational tenure: based on the findings in Table (), the majority of the study sample's participants (44.9%), (N=53) held a 6 -10 years Organizational tenure. More than 16 years holders took the position with the lowest percentage, at (3.4%), (N=7).

Table 6 demographic information analysis of the study sample

Personal information	Categories	Frequency	Percent
Gender	Male	109	92.4
	Female	9	7.6
Age	Less than 18 years	4	3.4
	18 – 25 years	37	31.4
	26 – 30 years	42	35.6
	31 – 40 years	28	23.7
	41-50	7	5.9
Level of Education	Primary School	53	44.9
	Bachelor's degree	32	27.1
	Two year college degree	7	5.9
	Four year college degree	18	15.3
	Post graduate degree	8	6.8
Marital status	Single	59	50.0
	Divorced	5	4.2
	married	54	45.8
Organizational tenure	Less than 1 year	19	16.1
	1 -5 years	31	26.3
	6 -10 years	41	34.7
	11 - 15 years	23	19.5
	More than 16 years	4	3.4
Total		**118**	**100**

4.2.4 Descriptive Statistics of Servant Leadership (SL) questions

The results of the Seven questions (SL1-SL7) that make up the descriptive statistics for Servant Leadership (SL) are displayed in Table (7). The total mean and standard deviation of this variable are (4.001), (.943) respectively.

Additionally, question (SL2), which had a mean of (4.28) and a standard deviation of (0.690) had the highest mean. "My manager makes my career development a priority" says question (SL2). The lowest mean was achieved by question (SL3), which came in at (3.64) and had a standard deviation of (1.074). Question (SL3) states that “I would seek help from my manager if I had a personal problem ”.

Table 7 Descriptive Statistics of Servant Leadership (SL)

Questions	Strongly Disagree		Disagree		Neutral		Agree		Strongly agree		Mean	Standard Deviation	Rank
	%	F.	%	F.	%	F.	%	F.	%	F.			
SL1	4.2	5	5.1	6	14.4	17	47.5	56	28.8	34	3.92	1.009	5
SL2	0.0	0	4.2	5	.8	1	57.6	68	37.3	44	4.28	.690	1
SL3	7.6	9	8.5	10	10.2	12	59.3	70	14.4	17	3.64	1.074	7
SL4	2.5	3	3.4	4	3.4	4	56.8	67	33.9	40	4.16	.847	2

SL7	4.2	5	6.8	8	11.9	14	33.9	40	43.2	51	4.05	1.100	4
Total of Servant Leadership (SL) questions											4.001	.943	-

4.2.5 Descriptive Statistics of Service Recovery Performance (SR)questions

The results of the Five questions (SR1-SR5) that make up the descriptive statistics for Service Recovery Performance (SR) are displayed in Table 8. The total mean and standard deviation of this variable are (3.992), (1.065) respectively.

Moreover, question (SR5), which had a mean of (4.18) and a standard deviation of (1.018) had the highest mean. " Complaining customers that I have dealt with in the past are among today's most loyal customers." says question (SR5). The lowest mean was achieved by question (SR3), which came in at (3.72) and had a standard deviation of (1.307). Question (SR3) states that "No customer whom I deals with leaves with problems unresolved.".

Table 8 Descriptive Statistics of Service Recovery Performance (SR) Questions

Questions	Strongly Disagree		Disagree		Neutral		Agree		Strongly agree		**Mean**	**Standard Deviation**	**Rank**
	%	**F.**	**%**	**F.**	**%**	**F.**	**%**	**F.**	**%**	**F.**			
SR1	5.1	6	2.5	3	4.2	5	53.4	63	34.7	41	4.10	.973	2
SR2	5.9	7	3.4	4	4.2	5	55.1	65	31.4	37	4.03	1.017	3

4.2.6 Descriptive Statistics of Bullying (BU)questions

The results of the twenty one questions (BU1-BU21) that make up the descriptive statistics for Bullying (BU) are displayed in Table (). The total mean and standard deviation of this variable are (2.07), (.997) respectively.

Furthermore, question (BU4), which had a mean of (4.18) and a standard deviation of (1.018) had the highest mean. "You are facing an unmanageable workload." says question (BU4). The lowest mean was achieved by question (BU3), which came in at (1.66) and had a standard deviation of (.839). Question (BU3) states that "You have got threats of violence or physical abuse or actual abuse".

Table 9 Descriptive Statistics of Bullying (BU) Questions

Questions	Strongly Disagree		Disagree		Neutral		Agree		Strongly agree		**Mean**	**Standard Deviation**	**ank**
	%	**F.**	**%**	**F.**	**%**	**F.**	**%**	**F.**	**%**	**F.**			
BU1	28.8	34	30.5	36	23.7	28	11.9	14	5.1	6	2.34	1.164	4

Total of Bullying (BU) questions											**2.07**	**.997**	**-**

4.3 Examining the study hypotheses:

Table 10 illustrates the analysis result of the first hypothesis. Pearson's (r) correlation was used to test the correlation between the study variables. The analysis result shows that the variables negatively related. Table () explains that There is a significant positive correlation between Servant leadership (SL) and service recovery performance (SR) as the value of the correlation coefficient was above moderate (.381**) at the level of significance (0.01) and reached the value of significant at (0.000). Besides, There is a significant negative correlation between Servant leadership (SL) and bullying (BU) as the value of the correlation coefficient was above moderate (-.162) Consequently, accepting the first hypothesis that states:

- H1 a: There is a significant positive correlation between Servant leadership and service recovery performance.
- H1 b: There is a significant negative correlation between Servant leadership and bullying.

Table 10 Correlation analysis between study variables

		SL	SR	BU
SL	Pearson Correlation	1	.381**	-.162-
	Sig. (2-tailed)		.000	.080
	N	118	118	118
SR	Pearson Correlation	.381**	1	-.082-
	Sig. (2-tailed)	.000		.377
	N	118	118	118
BU	Pearson Correlation	-.162-	-.082-	1
	Sig. (2-tailed)	.080	.377	
	N	118	118	118

**. Correlation is significant at the 0.01 level (2-tailed).

In addition, in order to analysis the second main hypotheses, the researchers conducted a multiple linear regression analysis in order to discover the effect of servant leadership on service recovery performance. From the analysis it shows that servant leadership illustrate .145% of the service recovery performance as described by the (R2). The significance value is 0.000 which is less than 0.05. Therefore, the model is statistically significance in predicting how the servant leadership effects positively on service recovery performance. At 5% level of significance, the f calculated was 19.656, which explains that the overall model was significant.

Table 11 Analysis the effects of servant leadership on service recovery performance.

Variable	Service Recovery Performance				
	β	t	F value	R^2	sig
SL	0.211	28.400	19.656	0.381	0.00

a. Predictors: (Constant), SL

In addition, From the analysis it shows that servant leadership illustrate .026% of the bullying as described by the (R2). The significance value is 0.080 which is less than 0.05. Therefore, the model is statistically significance in predicting how the servant leadership effects negatively on bullying. At 5% level of significance, the f calculated was 3.124, which explains that the overall model was significant.

Table 12 Analysis the effects of servant leadership on bullying.

Variable	Bullying				
	β	t	F value	R^2	sig
SL	0.274	27.480	3.124	.026	0.00

Consequently, the second main hypotheses accepted that states:

H2 a: servant leadership has a significant positive effect on service recovery performance.

H2 b: servant leadership has a significant negative effect on bullying.

5 Conclusion

It has been discovered that servant leadership, which is defined by a leader's commitment to meeting the needs of their team, significantly improves service recovery performance. Empathy, empowerment, and teamwork are highlighted in this leadership style, which can enhance team morale, boost customer satisfaction, and ultimately improve service recovery results. The importance servant leadership places on staff development and support is one of the main factors contributing to its effectiveness in service recovery. Servant leaders facilitate prompt and efficient customer service by fostering a positive work atmosphere and giving staff members the freedom to own the service recovery process.

In addition, servant leadership promotes a culture of ongoing learning and development, which is essential for service recovery. Servant leadership advocates push their colleagues to evaluate their work, grow from setbacks, and make adjustments to avoid problems in the future. This proactive strategy has the potential to improve overall service quality by resulting in more effective tactics for service recovery. Furthermore, effective communication is a critical ability for servant leaders, especially in service recovery scenarios. Service issues can be resolved more quickly and effectively when team members coordinate their efforts, address customer complaints, and set clear expectations.

Servant leadership is defined by its emphasis on helping others and advancing the welfare of staff members. It is typically linked to favorable results including increased engagement, job satisfaction, and organizational commitment. Nonetheless, the relationship is more complex when it comes to how it affects bullying.

One way that servant leaders can foster a pleasant work environment and deter bullying behavior is by modeling empathy, support, and respect. Bullying is less likely to happen in a culture of respect and cooperation that is fostered by servant leaders that put their team members' growth and well-being first. Conversely, other scholars contend that the same characteristics of servant leadership—humility and prioritizing the needs of others—may render servant leaders more vulnerable to bullying attacks. Because of their cooperative and caring demeanor, servant leaders may be perceived as easy pickings in situations where aggressive or manipulative behavior is common.

All things considered, even though servant leadership is usually regarded as advantageous for fostering a healthy work atmosphere, its effect on bullying is not totally evident. To

completely comprehend the relationship between bullying and servant leadership, as well as how personality variations and environmental circumstances may affect this relationship, more research is required.

In conclusion, by developing a happy work atmosphere, supporting effective communication, and encouraging continuous improvement, servant leadership can have a major positive impact on service recovery performance. Customer happiness, staff morale, and general service quality are likely to increase in organizations that practice servant leadership. Although servant leadership is frequently linked to favorable results, its impact on bullying is nuanced and contingent on the circumstances. Regardless of the leadership style used, organizations should be aware of the potential issues and have policies in place to stop and deal with bullying behavior

6 Recommendations

1. Establish a training program to teach managers and workforce the fundamentals and techniques of servant leadership. By doing so, a common understanding of the concept and its significance for service recovery may be established.
2. Servant leadership behaviors should be modeled by leaders in their interactions with staff members and clients. This entails being empathetic, actively listening, and giving staff members decision-making authority.
3. Establish an environment of open communication where staff members are at ease offering their opinions, worries, and suggestions. This can promote quicker resolution by assisting in the early identification of service faults.
4. Give staff members the freedom and ability to decide for themselves in order to promptly address client concerns. Higher staff satisfaction and better service recovery performance may result from this.
5. Put metrics in place to assess how servant leadership affects the effectiveness of service recovery. This can be used to monitor development over time and pinpoint areas that need work.
6. Serve as an example of a culture of continuous improvement by periodically evaluating and improving servant leadership techniques. To find areas for improvement, get input from both staff and clients.
7. Emphasize the importance of respect and civility in the workplace. This can be achieved through training, policies, and regular communication from leadership.
8. Provide education on recognizing and addressing bullying: Educate leaders and employees on the signs of bullying and how to address it effectively. This can empower individuals to speak up and seek support when needed.

CONCQUENCIS OF SERVANT LEADERSHIP ON SEVICE RECOVERYPERFORMANCY AND BULLYING"

Survey co-written with Rahand Faeq ,

Rose Saman, Sahand Salar . This survey will only be used for Research. We value your feedback, please take a moment to complete the survey Without revealing your name or Address.

Prepared by:

RAHAND FAEQ ALI – F180156

ROSE SAMAN ABDELAZIZ - F201427

SAHAND SALAR JAMAL – F200486

We're asking some questions about the company and the employees in this file, so you can fill out the survey below while protecting your name and address.

ئێمە چەند پرسیارێک دەکەین دەربارەی کۆمپانیاکە و کارمەندەکان لەم فایلەدا، بۆیە دەتوانیت ڕاپرسییەکە لە خوارەوە پڕکەیتەوە لە کاتی پاراستنی ناو و ناونیشانەکەت

Gender	ڕەگەز
o Male	نێر
o Female	مێ
Age	تەمەن
o Under 18	١٨ ژێر
o 18 – 25	٢٥-١٨
o 26 – 30	٣٠-٢٦
o 31 – 40	٤٠-٣١
o 41 – 50	٥٠-٤١
o 51 or above	٥١و بەرەوە سەرەوە
Education level	ئاستی خوێندن
o Primary School	بنەڕەتی
o Two year college degree	دوو ساڵ خوێندنی کۆلێژ
o Four year college degree	چوار ساڵ خوێندنی کۆلێژ
o Post graduate degree	خوێندنی باڵا و دیپلۆم
Marital status	باری هاوسەرگیری
o Single	سینگل
o divorced	جیابووەتەوە
o Married	هاوسەرگیری
Organizational tenure	ماوەی ئەزموونی کارکردن
o Less than one year	کەمتر لە یەک ساڵ
o 1-5	٥-١
o 6-10	١٠-٦
o 11-15	١٥-١١
o 16 or above	و بەرەو سەروو ١٦

Servant Leadership	Strongly disagree 1	Disagree 2	Natural 3	Agree 4	Strongly agree 5
My manager can tell if something work-related is going wrong بەڕێوەبەرەکەم دەتوانێت کێشەکانی کارکردن ببینێ					
My manager makes my career development a priority بەڕێوەبەرەکەم گەشەپێدانی پیشەکەم دەکاتە ئەولەویەت					
I would seek help from my manager if I had a personal problem داوای یارمەتی لە بەڕێوەبەرەکەم دەکەم ئەگەر کێشەی تایبەتی کەسیم هەبوو					
My manager emphasizes the importance of giving back to the community بەڕێوەبەرەکەم گرینگی دەدات بە گەڕاندنەوە بۆ کۆمەڵگا					
My manager puts my best interests ahead of his/her own بەڕێوەبەرەکەم باشترین بەرژەوەندییەکانی من دەخاتە پێش خۆی					
My manager gives me the freedom to handle difficult situations in the way that I feel is best بەڕێوەبەرەکەم ئازادی ئەوەم دەداتێ کە مامەڵە لەگەڵ بارودۆخە سەختەکاندا بکەم بەو شێوەیەی کە هەست دەکەم باشترینە					
My manager would not compromise ethical principles in order to achieve success بەڕێوەبەرەکەم بنەماکانی ئەخلاقی تێک نەدا بۆ ئەوەی سەرکەوتن بەدەست بهێنێت					

Service Recovery Performance	Strongly disagree 1	Disagree 2	Natural 3	Agree 4	Strongly agree 5
I consider all the things that I do; he/she handles dissatisfied customers quite well. هەموو ئەو شتانەی کە دەیکەم ؛ ئەوا زۆر بە باشی مامەڵە لەگەڵ کڕیارە نارازییەکان دەکام.					
I don't mind dealing with complaining customers من کێشەم نییە لە مامەڵەکردن لەگەڵ کڕیارە سکاڵاکارەکان					
No customer whom I deals with leaves with problems unresolved. هیچ کڕیارێک کە ئەم کارمەندە مامەڵەی لەگەڵ بکات کێشەی چارەسەر نەکراو جێدەهێڵێت.					
Satisfying complaining customers is a great thrill to this employee ڕازیکردنی کڕیارەکانی سکاڵاکردن سەرسوڕمانێکی گەورەیە بۆ ئەم کارمەندە					
Complaining customers that I have dealt with in the past are among today's most loyal customers. ئەو کڕیارانەی کە من لە ڕابردوودا مامەڵەیان لەگەڵدا کردوو، لە نێو کڕیارە دڵسۆزەکانی ئەمڕۆدان.					

Bullying	Strongly disagree	disagree	natural	agree	Strongly agree
Someone is withholding information that affects your performance. کەسێک هەڵگری ئەو زانیارییانە کە دەیشارێتەوە و کاریگەری لەسەر کارەکەت هەیە.					
Practical jokes are carried out by people you don't get along with. نوکتە لەلایەن کەسانێکەوە یاری دەکرێت کە پەیوەندیت لەگەڵ نییە.					
You have got threats of violence or physical abuse or actual abuse تۆ هەڕەشەی توندوتیژی یان دەستدرێژی جەستەییت پێگەیشتووە، یان ئەزموونی دەستدێژیت پێگەیشتووە					
You are facing an unmanageable workload. ڕووبەڕوی لۆدێکی کارکردنی زۆر دەبێتەوە					
You are subjected to excessive teasing and sarcasm. زۆر لە ڕادەبەدەر تووشی گاڵتە و گاڵتەجاڕی دەبی.					
You are not pressured to claim something to which you are rightfully entitled, such as sick leave, holiday entitlement, or travel expenses. فشارت لەسەر نییە بۆ داواکردنی مافەکانی خۆت وەک، مۆڵەتی نەخۆشی، مافی پشوو، یان خەرجییەکانی گەشتکردن					
Excessive monitoring of your work is being conducted. چاودێرییەکی زۆر لە کارەکانت دەکرێت					
Allegations are made against you سکاڵا لە دژی تۆ دەکرێت					
You are facing humiliation or ridicule in connection with your work. تۆ ڕووبەڕووی شەرمەزاری یان گاڵتەجاڕی دەبێتەوە سەبارەت بە کارەکەتەوە.					
Your opinions and views are ignored بۆچوون و بۆچوونەکانت پشتگوێ خراوە					

You are enduring persistent criticism of your work and effort. ڕەخنەیەکی بەردەوامت هەیە لە کار و هەوڵەکانت					
You are being ignored or facing a hostile reaction when you approach تۆ پشتگوێ خراویت یان ڕووبەڕووی کاردانەوەیەکی دوژمنکارانە دەبیتەوە کاتێک نزیک دەبیتەوە					
You receive repeated reminders of your errors or mistakes. تۆ دووبارە وەبیر هێنانەوەی هەڵەکانت یان هەڵەکانت وەردەگریت.					
You have received hints or signals from others suggesting that you should quit your job. تۆ ئاماژەت لە کەسانی تر وەرگرتووە کە پێشنیاری ئەوە دەکەن کە دەبێت واز لە کارەکەت بهێنیت.					
Intimidating behaviors such as finger-pointing, invasion of personal space, showing blocking/barring the way are made هەڵسوکەوتی ئاژارام وەک پەنجە ڕاکێشان ، داگیرکردنی بۆشایی کەسی، نیشاندانی بلۆککردن/قەدەغەکردنی ڕێگا					
You are being shouted at or targeted with spontaneous anger or rage. هاوارت بەسەر دەکرێت و بە بەردەوامی تووشی تووڕەیی دەبیتەوە					
Insulting or offensive remarks are being made about your personal habits, background, attitudes, or private life. قسەی سووکایەتی پێکردن یان هەڕەشەکردن دەربارەی نەریتە کەسییەکانت، باکگراوند، هەڵوێستەکانت، یان ژیانی تایبەتیت دەکرێت.					
You are being ignored or excluded تۆ پشتگوێ دەخرێیت					
You are being ordered to work below your level of competence فەرمانت پێ دەکرێت کە لە ژێر ئاستی لێهاتوویی خۆت کار بکەیت					
Gossips and rumors are being spread about you دەنگۆ و قسە دەربارەی تۆ بڵاو دەبنەوە					
Your key areas of responsibility are being removed or replaced with more trivial or unpleasant tasks. بوارە سەرەکییەکانی بەرپرسیارێتیت لادەبرێن یان دەگۆڕدرێن بە نەرکی کەم یان ناخۆشتر.
